Highland/iBoxx Senior Loan ETF

Ticker: SNLN — NASDAQ, Inc.

Investment Objective

The investment objective of Highland/iBoxx Senior Loan ETF (the “Fund”) is to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Markit iBoxx USD Liquid Leveraged Loan Index (the “Underlying Index”).

Fees and Expenses

The following tables describe the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples.**

Shareholder Fees (fees paid directly from your investment)

Maximum Sales Charge (Load) Imposed On Purchases (as a % of offering price)	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends and other Distributions (as a % of offering price)	None
Maximum Deferred Sales Charge (Load) (as a % of the net asset value at the time of purchase or redemption, whichever is lower)	None
Exchange Fee	None
Redemption Fee	None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment).

Management Fee	0.45%
Other Expenses	0.31%
Expedited Settlement Facility Fees	0.01%
Remainder of Other Expenses	0.30%
Total Annual Fund Operating Expenses	0.76%
Expense Reimbursement ¹	-0.20%
Total Annual Fund Operating Expenses After Expense Reimbursement	0.56%

¹ NexPoint Asset Management, L.P. (“NexPoint” or the “Adviser”) has contractually agreed to limit the total annual operating expenses (exclusive of taxes, brokerage commissions and other transaction costs, acquired fund fees and expenses, extraordinary expenses and dividend expense on short sales (collectively, the “Excluded Expenses”)) of the Fund to 0.55% of average daily net assets of the Fund (the “Expense Cap”). The Expense Cap will continue through at least October 31, 2023, and may not be terminated prior to this date without the action or consent of the Fund’s Board of Trustees (the “Board”). Under the Expense Cap, the Adviser may recoup waived and/or reimbursed amounts with respect to the Fund within thirty-six months of the date such amounts were waived or reimbursed, provided the Fund’s total annual operating expenses, including such recoupment, do not exceed the Expense Cap in effect at the time of such waiver/reimbursement.

Expense Example

This Example helps you compare the cost of investing in the Fund to the cost of investing in other mutual funds. The Example assumes that (i) you invest \$10,000 in the Fund for the time periods indicated and then sell or redeem all your

shares at the end of those periods, (ii) your investment has a 5% return each year, and (iii) the Fund’s operating expenses remain the same. Only the first year of each period in the Example takes into account the expense reimbursement described above. Your actual costs may be higher or lower. Investors in the Fund may pay brokerage commissions on their purchases and sales of Fund shares, which are not included in the examples below.

1 Year	3 Years	5 Years	10 Years
\$ 57	\$ 223	\$ 403	\$ 924

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 157% of the average value of its portfolio.

Principal Investment Strategies

The Fund will, under normal circumstances, invest at least 80% of its assets (the “80% basket”) in component securities of the Underlying Index (“Component Securities”). The Fund may invest the remaining 20% of its assets (the “20% basket”) in securities not included in the Underlying Index, but which the Adviser believes will help the Fund track the Underlying Index. For example, the Fund may invest in securities that are not components of the Underlying Index to reflect various corporate actions (such as mergers) and other changes in the Underlying Index (such as reconstitutions, additions and deletions). The Fund may invest in securities of any type and of companies of any market capitalization, market sector or industry. The Fund may use the 20% basket to invest in securities issued by other investment companies, including other exchange-traded funds. The Fund also may invest in warrants and may also use derivatives, primarily swaps (including equity, variance and volatility swaps), and options and futures contracts on securities, interest rates, non-physical commodities and/or currencies, with the 20% basket to track the Underlying Index and as substitutes for direct investments the Fund can make. The Fund may also use derivatives such as swaps, options (including options on futures), futures, and foreign currency transactions (e.g., foreign currency swaps, futures and forwards) to hedge various investments for risk management and speculative purposes. In addition, the Fund’s 20% basket may be invested in cash and cash equivalents, including shares of money market funds advised by the Adviser or its affiliates.

Unlike many investment companies, the Fund does not try to “beat” the index it tracks. The Fund uses a passive management strategy designed to track the total return performance of the Underlying Index as a proxy for the senior secured loan universe. The Underlying Index is a subset of the Markit iBoxx USD Leveraged Loan Index. “Leveraged Loans” are loans to companies that typically already have a high amount of debt and are often characterized by lower credit ratings or higher interest rates. The Underlying Index is a rules-based index consisting of some of the largest, most liquid Leveraged Loans, as measured by the number of active market participants trading the security and the dollar face amount of outstanding senior loans issued. Currently, loans eligible for inclusion in the Underlying Index are measured by type, size, liquidity, spread, credit rating and minimum time to maturity.

The Underlying Index is sponsored by Markit Indices Limited (the “Index Provider”), an organization that is independent of the Fund and the Adviser. The Index Provider determines the composition and relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index.

The Adviser uses a representative sampling indexing strategy to manage the Fund. “Representative sampling” is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability, duration, maturity or credit ratings and yield) and liquidity measures similar to those of the Underlying Index. The Fund may, but is not required to, hold all of the securities in the Underlying Index. “Tracking error” is the difference between the performance (return) of the Fund’s portfolio and that of the Underlying Index. The Adviser expects that, over time, the Fund’s tracking error will not exceed 5%. Funds that employ a representative sampling strategy may incur tracking error risk to a greater extent than funds that seek to replicate an index.

The Component Securities primarily consist of senior loans (“Senior Loans”) to domestic or foreign corporations, partnerships and other entities that operate in a variety of industries and geographic regions, which may include emerging markets (“Borrowers”). The Fund will, under normal circumstances, invest at least 80% of its assets (i.e., net assets plus borrowings for investment purposes) in Senior Loans. Senior Loans, at the time of the Fund’s purchase, have the most senior position in a Borrower’s capital structure or share the senior position with other senior debt securities of the Borrower. Senior Loans generally are arranged through private negotiations between a Borrower and several

financial institutions (the “Lenders”) represented in each case by one or more such Lenders acting as agent (the “Agent”) of the several Lenders. On behalf of the Lenders, the Agent is primarily responsible for negotiating the loan agreement (“Loan Agreement”) that establishes the relative terms and conditions of the Senior Loan and rights of the Borrower and the Lenders. The Component Securities in which the Fund will invest are expected to be below investment grade securities (also known as “high yield securities” or “junk securities”). Such securities are rated below investment grade by a nationally recognized statistical rating organization (“NRSRO”) or are unrated but deemed by the Adviser to be of comparable quality. The Underlying Index may include, and the Fund may acquire and retain in its portfolio, below investment grade or unrated securities, including loans of Borrowers that are insolvent or in default, provided that all criteria of the Underlying Index, including liquidity requirements, are met.

The Fund may invest in participations (“Participations”) in Senior Loans and may purchase assignments (“Assignments”) of portions of Senior Loans from third parties. Senior Loans often are secured by specific assets of the Borrower, although the Fund may invest without limitation in Senior Loans that are not secured by any collateral.

The Fund is a non-diversified fund as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), but intends to adhere to the diversification requirements applicable to regulated investment companies (“RICs”) under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Code”). The Fund may invest 25% or more of the value of its assets in an industry or group of industries to the extent that the Underlying Index concentrates in an industry or group of industries. The Fund is not intended to be a complete investment program. Except for investment restrictions designated as fundamental in this Prospectus or in the Fund’s Statement of Additional Information (“SAI”), the investment policies described in this Prospectus or the Fund’s SAI are not fundamental and may be changed without shareholder approval.

The Adviser expects that the Fund’s active or frequent trading of portfolio securities will result in a portfolio turnover rate in excess of 100% on an annual basis. As a result, the Fund may be more likely to realize capital gains, including short-term capital gains taxable as ordinary income, that must be distributed to shareholders as taxable income. High turnover may also cause the Fund to pay more brokerage commissions and to incur other transaction costs, which may detract from performance. The Fund’s portfolio turnover rate and the amount of brokerage commissions and transaction costs it incurs will vary over time based on market conditions.

Principal Risks

When you sell Fund shares, they may be worth less than what you paid for them. Consequently, you can lose money by investing in the Fund. No assurance can be given that the Fund will achieve its investment objective, and investment results may vary substantially over time and from period to period. An investment in the Fund is not appropriate for all investors. An investment in the Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

Senior Loans Risk. The Fund's investments in Senior Loans are typically below investment grade and are considered speculative because of the credit risk of their issuers. As with any debt instrument, Senior Loans are generally subject to the risk of price declines and to increases in interest rates, particularly long-term rates. Senior loans are also subject to the risk that, as interest rates rise, the cost of borrowing increases, which may increase the risk of default. In addition, the interest rates of floating rate loans typically only adjust to changes in short-term interest rates; long-term interest rates can vary dramatically from short-term interest rates. Therefore, Senior Loans may not mitigate price declines in a rising long-term interest rate environment. The secondary market for loans is generally less liquid than the market for higher grade debt. Less liquidity in the secondary trading market could adversely affect the price at which the Fund could sell a loan, and could adversely affect the Fund's income. The volume and frequency of secondary market trading in such loans varies significantly over time and among loans. Although Senior Loans in which the Fund will invest will often be secured by collateral, there can be no assurance that liquidation of such collateral would satisfy the Borrower's obligation in the event of a default or that such collateral could be readily liquidated.

LIBOR has historically been the most common benchmark interest rate index used to make adjustments to variable-rate loans; however, due to manipulation allegations in 2012 and reduced activity in the financial markets that it measures, the Financial Conduct Authority (the "FCA"), the United Kingdom financial regulatory body, announced that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. Please refer to "LIBOR Transition and Associated Risk" for more information.

High-Yield Debt Securities Risk. Below investment grade securities or unrated securities of similar credit quality (commonly known as "high-yield securities" or "junk securities") are more likely to default than higher rated securities. The Fund's ability to invest in high-yield debt

securities generally subjects the Fund to greater risk than securities with higher ratings. Such securities are regarded by the rating organizations as predominantly speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation. The market value of these securities is more sensitive to corporate developments and economic conditions and can be volatile. Market conditions can diminish liquidity and make accurate valuations difficult to obtain.

Telecommunications Sector Risk. The Fund may be impacted by risks faced by companies in the telecommunications services industry, including: a telecommunications market characterized by increasing competition and regulation by the Federal Communications Commission and various state regulatory authorities; the need to commit substantial capital to meet increasing competition, particularly in formulating new products and new services using new technology; and technological innovations that may make various products and services obsolete.

Exchange-Traded Funds Risk. The price movement of an ETF may not exactly track the underlying index and may result in a loss. In addition, shareholders bear both their proportionate share of the Fund's expenses and indirectly bear similar expenses of the underlying investment company when the Fund invests in shares of another investment company.

Asset Class Risk. Securities in the Underlying Index or in the Fund's portfolio may underperform in comparison to the general securities markets or other asset classes.

Cash Transaction Risk. Unlike most exchange-traded funds ("ETFs"), the Fund currently intends to effect creations and redemptions principally for cash, rather than principally for in-kind securities, because of the nature of the Fund's investments. As a result, investments in Fund shares may be less tax-efficient than investments in conventional ETFs. Paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time. This may cause the Fund to recognize gains or losses that it might not have incurred if it had made a redemption in-kind.

Commodities Risk. Commodities markets historically have been extremely volatile, and the performance of securities and other instruments that provide exposure to those markets therefore also may be highly volatile. The commodities markets may fluctuate widely based on a variety of factors. These include changes in overall market movements, domestic and foreign political and economic events and policies, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor expectations concerning interest rates, domestic and foreign

inflation rates and/or investor expectations concerning inflation rates and investment and trading activities of mutual funds, hedge funds and commodities funds. Commodity-linked derivative instruments have a high degree of price variability and are subject to rapid and substantial price changes. Commodity-linked derivative instruments may employ leverage, which creates the possibility for losses greater than the amount invested.

Counterparty Risk. A counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations.

Covenant-Lite Loans Risk. Loans in which the Fund invests include covenant-lite loans, which carry more risk to the lender than traditional loans as they may contain fewer or less restrictive covenants on the borrower than traditionally included in loan documentation or may contain other borrower-friendly characteristics. The Fund may experience relatively greater difficulty or delays in enforcing its rights on its holdings of certain covenant-lite loans and debt securities than its holdings of loans or securities with the usual covenants.

Credit Risk. The issuers of certain securities or the counterparties of a derivatives contract or repurchase contract might be unable or unwilling (or perceived as being unable or unwilling) to make interest and/or principal payments when due, or to otherwise honor its obligations. Debt securities are subject to the risk of non-payment of scheduled interest and/or principal. Non-payment would result in a reduction of income to the Fund, a reduction in the value of the obligation experiencing non-payment and a potential decrease in the Fund's net asset value ("NAV") and the market price of the Fund's shares.

Debt Securities and Leveraged Loans Risk. The value of debt securities typically changes in response to various factors, including, by way of example, market-related factors (such as changes in interest rates or changes in the risk appetite of investors generally) and changes in the actual or perceived ability of the issuer (or of issuers generally) to meet its (or their) obligations. During periods of rising interest rates, debt securities generally decline in value. Conversely, during periods of falling interest rates, debt securities generally rise in value. This kind of market risk is generally greater for funds investing in debt securities with longer maturities. In addition, the interest rates of floating rate loans typically only adjust to changes in short-term interest rates; long-term interest rates can vary dramatically from short-term interest rates. Leveraged Loans are subject to the same risks typically associated with debt securities. In addition, Leveraged Loans, which typically hold a senior position in the capital structure of a borrower, are subject to the risk that a court could

subordinate such loans to presently existing or future indebtedness or take other action detrimental to the holders of Leveraged Loans. Leveraged Loans are also especially subject to the risk that the value of the collateral, if any, securing a loan may decline, be insufficient to meet the obligations of the borrower or be difficult to liquidate.

Because loans are not ordinarily registered with the Securities and Exchange Commission (the "SEC") or any state securities commission or listed on any securities exchange, there is usually less publicly available information about such instruments. In addition, loans may not be considered "securities" for purposes of the anti-fraud protections of the federal securities laws and, as a result, as a purchaser of these instruments, the Fund may not be entitled to the anti-fraud protections of the federal securities laws. In the course of investing in such instruments, the Fund may come into possession of material nonpublic information and, because of prohibitions on trading in securities of issuers while in possession of such information, it may be unable to enter into a transaction in a publicly-traded security of that issuer when it would otherwise be advantageous for it to do so. Alternatively, the Fund may choose not to receive material nonpublic information about an issuer of such loans, with the result that it may have less information about such issuers than other investors who transact in such assets.

Derivatives Risk. Derivatives Risk is a combination of several risks, including the risks that: (1) an investment in a derivative instrument may not correlate well with the performance of the securities or asset class to which the Fund seeks exposure, (2) derivative contracts, including options, may expire worthless and the use of derivatives may result in losses to the Fund, (3) a derivative instrument entailing leverage may result in a loss greater than the principal amount invested, (4) derivatives not traded on an exchange may be subject to credit risk, for example, if the counterparty does not meet its obligations (see also "Counterparty Risk"), and (5) derivatives not traded on an exchange may be subject to liquidity risk and the related risk that the instrument is difficult or impossible to value accurately. In addition, changes in laws or regulations may increase the costs of using derivatives, may limit the availability of some forms of derivatives or the Fund's ability to use derivatives, and may adversely affect the performance of some derivative instruments used by the Fund as well as the Fund's ability to pursue its investment objective through the use of such instruments.

Emerging Markets Risk is the risk of investing in securities of issuers tied economically to emerging markets, which entails all of the risks of investing in securities of non-U.S. issuers detailed below under "Foreign Securities Risk" to a heightened degree. These heightened risks include: (i) greater risks of expropriation, confiscatory taxation,

nationalization, and less social, political and economic stability; (ii) the smaller size of the markets for such securities and a lower volume of trading, resulting in lack of liquidity and in price volatility; (iii) greater fluctuations in currency exchange rates; and (iv) certain national policies that may restrict the Fund's investment opportunities, including restrictions on investing in issuers or industries deemed sensitive to relevant national interests.

Fixed Income Market Risk. Fixed income markets may, in response to governmental intervention, economic or market developments (including potentially a reduction in the number of broker-dealers willing to engage in market-making activity), or other factors, experience periods of increased volatility and reduced liquidity. During those periods, the Fund may experience increased levels of shareholder redemptions, and may have to sell securities at times when it would otherwise not do so, and at unfavorable prices. Fixed income securities may be difficult to value during such periods. Beginning in March 2022, the U.S. Federal Reserve (the "Fed") began increasing interest rates and has signaled the potential for further increases. It is difficult to accurately predict the pace at which the Fed will increase interest rates any further, or the timing, frequency or magnitude of any such increases, and the evaluation of macro-economic and other conditions could cause a change in approach in the future. Any such increases generally will cause market interest rates to rise, which will cause the value of a Fund's debt securities to fall. Rising market interest rates could have unpredictable effects on the markets and may expose fixed-income and related markets to heightened volatility, which could reduce liquidity for certain investments, adversely affect values, and increase costs. Increased redemptions may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so and may lower returns. If dealer capacity in fixed-income and related markets is insufficient for market conditions, it may further inhibit liquidity and increase volatility in the fixed-income and related markets. Further, potential future changes in government policy may affect interest rates.

Focused Investment Risk. The Fund's investments in Senior Loans arranged through private negotiations between a Borrower and several financial institutions may expose the Fund to risks associated with the financial services industry. The financial services industry is subject to extensive government regulation, which can limit both the amounts and types of loans and other financial commitments financial services companies can make and the interest rates and fees they can charge. Profitability is largely dependent on the availability and cost of capital funds, and can fluctuate significantly when interest rates change. Because financial services companies are highly dependent on short-term interest rates, they can be adversely affected by downturns in

the U.S. and foreign economies or changes in banking regulations. Losses resulting from financial difficulties of Borrowers can negatively affect financial services companies.

Foreign Securities Risk. Investments in securities of non-U.S. issuers involve certain risks not involved in domestic investments (for example, fluctuations in foreign exchange rates (for non-U.S. securities not denominated in U.S. dollars); future foreign economic, financial, political and social developments; nationalization; exploration or confiscatory taxation; smaller markets; different trading and settlement practices; less governmental supervision; and different accounting, auditing and financial recordkeeping standards and requirements) that may result in the Fund experiencing more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. companies. These risks are magnified for investments in issuers tied economically to emerging markets, the economies of which tend to be more volatile than the economies of developed markets. In addition, investments by the Fund in non-U.S. securities may be subject to withholding and other taxes imposed by foreign countries on dividends, interest, capital gains, or other income or proceeds. Those taxes will reduce the Fund's yield on any such securities.

Illiquid and Restricted Securities Risk. The Adviser may not be able to sell illiquid or restricted securities, such as securities issued pursuant to Rule 144A of the Securities Act of 1933, at the price it would like or may have to sell them at a loss. Securities of non-U.S. issuers and emerging or developing markets securities in particular, are subject to greater liquidity risk.

Industry Concentration Risk. Because the Fund may invest 25% or more of the value of its assets in an industry or group of industries to the extent that the Underlying Index concentrates in an industry or group of industries, the Fund's performance largely depends on the overall condition of such industry or group of industries and the Fund is susceptible to economic, political and regulatory risks or other occurrences associated with that industry or group of industries.

Intellectual Property Risk. The Adviser relies on a license, which may be terminated by the Index Provider that permits the Fund to use the Underlying Index and associated trade names, trademarks and service marks (the "Intellectual Property") in connection with the name and investment strategies of the Fund. In the event the license is terminated or the Index Provider does not have rights to license the Intellectual Property, it may have a significant effect on the operation of the Fund.

Interest Rate Risk. Fixed income securities may decline in value because of changes in interest rates. When interest rates decline, the value of fixed rate securities already held by the Fund can be expected to rise. Conversely, when interest

rates rise, the value of existing fixed rate portfolio securities can be expected to decline. A fund with a longer average portfolio duration will be more sensitive to changes in interest rates than a fund with a shorter average portfolio duration. In addition, the interest rates of floating rate loans typically only adjust to changes in short-term interest rates; long-term interest rates can vary dramatically from short-term interest rates.

Loans in which the Fund will invest generally pay interest at rates that are periodically redetermined by reference to a base lending rate plus a premium. These base lending rates generally are the London Interbank Offered Rate (“LIBOR”), the prime rate offered by one or more major United States banks (“Prime Rate”) or the certificate of deposit (“CD”) rate or other base lending rates used by commercial Lenders. Due to manipulation allegations in 2012 and reduced activity in the financial markets that it measures, in July 2017, the FCA, the United Kingdom financial regulatory body, announced that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. Please refer to “LIBOR Transition and Associated Risk” for more information.

Lender Liability Risk. A number of judicial decisions have upheld the right of Borrowers to sue lending institutions on the basis of various evolving legal theories founded upon the premise that an institutional Lender has violated a duty of good faith and fair dealing owed to the Borrower or has assumed a degree of control over the Borrower resulting in a creation of a fiduciary duty owed to the Borrower or its other creditors or shareholders. Because of the nature of certain of the Fund’s investments, the Fund or the Adviser could be subject to such liability.

LIBOR Transition and Associated Risk. LIBOR is the average offered rate for various maturities of short-term loans between major international banks who are members of the British Bankers Association. LIBOR has historically been the most common benchmark interest rate index used to make adjustments to variable-rate loans. It is used throughout global banking and financial industries to determine interest rates for a variety of financial instruments (such as debt instruments and derivatives) and borrowing arrangements.

Due to manipulation allegations in 2012 and reduced activity in the financial markets that it measures, in July 2017, the FCA, the United Kingdom financial regulatory body, announced that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. The ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publishing certain LIBOR maturities, including some U.S. LIBOR maturities, on December 31, 2021, and is expected to cease publishing the remaining and most liquid U.S. LIBOR maturities on June 30, 2023. It is expected that market participants have transitioned or will transition to the use of alternative reference or benchmark rates prior to the

applicable LIBOR publication date. Additionally, although regulators have encouraged the development and adoption of alternative rates, such as the Secured Overnight Financing Rate (“SOFR”), the future utilization of LIBOR or of any particular replacement rate remains uncertain.

It is expected that market participants will adopt alternative rates such as SOFR or otherwise amend financial instruments referencing LIBOR to include fallback provisions and other measures that contemplate the discontinuation of LIBOR or other similar market disruption events, but neither the effect of the transition process nor the viability of such measures is known.

Limited Information Risk. The types of Senior Loans in which the Fund will invest historically may not have been rated by a NRSRO, have not been registered with the SEC or any state securities commission, and have not been listed on any national securities exchange. Although the Fund will generally have access to financial and other information made available to the Lenders in connection with Senior Loans, the amount of public information available with respect to Senior Loans will generally be less extensive than that available for rated, registered or exchange-listed securities.

Liquidity Risk. Liquidity risk is the risk that low trading volume, lack of a market maker, large position size, or legal restrictions (including daily price fluctuation limits or “circuit breakers”) limits or prevents the Fund from selling particular securities or unwinding derivative positions at desirable prices. At times, a major portion of any portfolio security may be held by relatively few institutional purchasers. Even if the Fund considers such securities liquid because of the availability of an institutional market, such securities may become difficult to value or sell in adverse market or economic conditions. Because loan transactions often take longer to settle than transactions in other securities, the Fund may not receive the proceeds from the sale of a loan for a significant period of time. As a result, the Fund may maintain higher levels of cash and short-term investments than mutual funds that invest in securities with shorter settlement cycles and/or may enter into a line of credit to permit the Fund to finance redemptions pending settlement of the sale of portfolio securities, each of which may adversely affect the Fund’s performance. No assurance can be given that these measures will provide the Fund with sufficient liquidity in the event of abnormally large redemptions.

Loan Participation Risk. In addition to the risks typically associated with debt securities, Participations involve the risk that there may not be a readily available market for Participation interests and, in some cases, the Fund may have to dispose of such securities at a substantial discount from face value. Participations also involve the credit risk associated with the underlying corporate borrower.

Management Risk. Management risk is the risk associated with the fact that the Fund relies on the Adviser's ability to achieve its investment objective. The Adviser may be incorrect in its assessment of the intrinsic value of companies whose securities the Fund holds, which may result in a decline in the value of Fund shares and failure to achieve its investment objective. The Fund's portfolio manager uses qualitative analyses and/or models. Any imperfections or limitations in such analyses and models could affect the ability of the portfolio manager to implement strategies.

Market Price Variance Risk. Fund shares will be listed for trading on NASDAQ, Inc. (the "Exchange") and can be bought and sold in the secondary market at market prices. The market prices of shares will fluctuate in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of Shares may deviate significantly from NAV during periods of market volatility. The Adviser cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Adviser believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, the securities held by the Fund may be traded in markets that close at a different time than the Exchange. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when the Exchange is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the Shares' NAV may widen. Further, secondary markets may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which could cause a material decline in the Fund's NAV. The bid/ask spread of the Fund may be wider in comparison to the bid/ask spread of other ETFs, given the liquidity of the Fund's assets. The Fund's investment results are measured based upon the daily NAV of the Fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those purchasing and redeeming directly with the Fund.

Non-Diversification Risk. An investment in the Fund could fluctuate in value more than an investment in a diversified fund. As a non-diversified fund for purposes of the 1940 Act, the Fund may invest a larger portion of its assets in the securities of fewer issuers than a diversified fund. The Fund's investment in fewer issuers may result in the Fund's shares being more sensitive to the economic results of those issuers. An investment in the Fund could fluctuate in value more than an investment in a diversified fund.

Non-Payment Risk. Debt securities are subject to the risk of non-payment of scheduled interest and/or principal. Non-payment would result in a reduction of income to the Fund, a reduction in the value of the obligation experiencing

non-payment and a potential decrease in the Fund's NAV and the market price of the Fund's shares.

Ongoing Monitoring Risk. Ongoing monitoring risk is the risk associated with ongoing monitoring of the Agent. On behalf of the several Lenders, the Agent generally will be required to administer and manage the Senior Loans and, with respect to collateralized Senior Loans, to service or monitor the collateral. Financial difficulties of Agents can pose a risk to the Fund. Unless, under the terms of the loan, the Fund has direct recourse against the Borrower, the Fund may have to rely on the Agent or other financial intermediary to apply appropriate credit remedies against a Borrower.

Operational and Technology Risk. Cyber-attacks, disruptions, or failures that affect the Fund's service providers, counterparties, market participants, or issuers of securities held by the Fund may adversely affect the Fund and its shareholders, including by causing losses for the Fund or impairing Fund operations.

Options Risk. Options, such as covered calls and covered puts, are subject to the risk that significant differences between the securities and options markets could result in an imperfect correlation between these markets.

Pandemics and Associated Economic Disruption. An outbreak of respiratory disease caused by a novel coronavirus was first detected in China in late 2019 and subsequently spread globally ("COVID-19"). This coronavirus has resulted in and may continue to result in the closing of borders, enhanced health screenings, disruptions to healthcare service preparation and delivery, quarantines, cancellations, disruptions to supply chains and customer activity, as well as general anxiety and economic uncertainty. The impact of this coronavirus may be short-term or may last for an extended period of time and has resulted and may continue to result in a substantial economic downturn. Health crises caused by outbreaks of disease, such as the coronavirus, may exacerbate other pre-existing political, social and economic risks. The impact of this outbreak, and other epidemics and pandemics that may arise in the future, could continue to negatively affect the global economy, as well as the economies of individual countries, individual companies and the market in general in significant and unforeseen ways. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, and impact the Fund's ability to complete repurchase requests. Any such impact could adversely affect the Fund's performance, the performance of the securities in which the Fund invests, lines of credit available to the Fund and may lead to losses on your investment in the Fund. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a

single country or region or events affecting a single or small number of issuers.

Passive Investment Risk. The Fund is not actively managed and NexPoint does not attempt to take defensive positions under any market conditions, including during declining markets.

Portfolio Turnover Risk. High portfolio turnover will increase the Fund's transaction costs and may result in increased realization of net short-term capital gains (which are taxable to shareholders as ordinary income when distributed to them), higher taxable distributions and lower after-tax performance.

Prepayment Risk. During periods of falling interest rates, issuers of debt securities may repay higher rate securities before their maturity dates. This may cause the Fund to lose potential price appreciation and to be forced to reinvest the unanticipated proceeds at lower interest rates. This may result in a decrease in the Fund's income.

Regulatory Risk. To the extent that legislation or state or federal regulators impose additional requirements or restrictions with respect to the ability of financial institutions to make loans in connection with highly leveraged transactions, the availability of Senior Loan interests for investment by the Fund may be adversely affected.

In addition, such requirements or restrictions may reduce or eliminate sources of financing for affected Borrowers. Further, to the extent that legislation or federal or state regulators require such institutions to dispose of Senior Loan interests relating to highly leveraged transactions or subject such Senior Loan interests to increased regulatory scrutiny, such financial institutions may determine to sell Senior Loan interests in a manner that results in a price that, in the opinion of the Adviser, is not indicative of fair value. Were the Fund to attempt to sell a Senior Loan interest at a time when a financial institution was engaging in such a sale with respect to the Senior Loan interest, the price at which the Fund could consummate such a sale might be adversely affected. See "Industry Concentration Risk" above.

Securities Market Risk. The value of securities owned by the Fund may go up or down, sometimes rapidly or unpredictably, due to factors affecting particular companies or the securities markets generally. A general downturn in the securities market may cause multiple asset classes to decline in value simultaneously. Many factors can affect this value and you may lose money by investing in the Fund.

Stop Order Risk. During periods of high market volatility, a Fund share may trade at a significant discount to its NAV, and in these circumstances certain types of brokerage orders may expose an investor to an increased risk of loss. A "stop order," sometimes called a "stop-loss order," may cause a Fund share

to be sold at the next prevailing market price once the "stop" level is reached, which during a period of high volatility can be at a price that is substantially below NAV. By including a "limit" criteria with a brokerage order, a shareholder may be able to limit the size of the loss resulting from the execution of an ill-timed stop order, although no assurance can be given that inclusion of limit criteria will benefit the shareholder.

Swaps Risk involves both the risks associated with an investment in the underlying investments or instruments (including equity investments) and counterparty risk. In a standard over-the-counter ("OTC") swap transaction, two parties agree to exchange the returns, differentials in rates of return or some other amount calculated based on the "notional amount" of predetermined investments or instruments, which may be adjusted for an interest factor. Swaps can involve greater risks than direct investments in securities, because swaps may be leveraged and OTC swaps are subject to counterparty risk (e.g., the risk of a counterparty's defaulting on the obligation or bankruptcy), credit risk and pricing risk (i.e., swaps may be difficult to value). Swaps may also be considered illiquid. Certain swap transactions, including certain classes of interest rate swaps and credit default swaps, may be subject to mandatory clearing and exchange trading, although the swaps in which the Fund will invest are not currently subject to mandatory clearing and exchange trading. The use of swaps is a highly specialized activity which involves investment techniques, risk analyses and tax planning different from those associated with ordinary portfolio securities transactions. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund.

Tracking Error Risk. The performance of the Fund may diverge from that of the Underlying Index. Because the Fund employs a representative sampling strategy, the Fund may experience tracking error to a greater extent than a fund that seeks to replicate an index. The Adviser may not be able to cause the Fund's performance to correlate to that of the Underlying Index, either on a daily or aggregate basis. Because the Underlying Index rebalances monthly but the Fund is not obligated to do the same, the risk of tracking error may increase following the rebalancing of the Underlying Index.

An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other government agency. As with any investment company, there is no guarantee that the Fund will achieve its goal.

Performance

The bar chart and the Average Annual Total Returns table below provide some indication of the risks of investing in the Fund by showing the Fund's investment results from November 6, 2012 (commencement of operations) through

December 31, 2021 and how the Fund's average annual returns for various periods compare with a broad measure of market performance. As with all mutual funds, the Fund's past performance (before and after taxes) does not predict how the Fund will perform in the future. Both the chart and the table assume the reinvestment of dividends and distributions. The Fund's performance reflects applicable fee waivers and/or expense limitations in effect during the periods presented, without which returns would have been lower. Updated information on the Fund's performance can be obtained by visiting <https://www.nexpointassetmgmt.com/snln-etf/#performance> or by calling 1-855-799-4757.

Annual Total Returns

The bar chart shows the performance of the Fund as of December 31.

The highest calendar quarter total return of the Fund was 4.78% for the quarter ended March 31, 2019 and the lowest calendar quarter total return was -10.93% for the quarter ended March 31, 2020. The Fund's year-to-date total return through September 30, 2022 was (5.44)%.

Average Annual Total Returns

For the period ended December 31, 2021

	1 Year	5 Year	Since Inception (11/6/12)
Return Before Taxes	-2.05%	0.76%	1.78%
Return After Taxes on Distributions	0.91%	-0.88%	-0.02%
Return After Taxes on Distributions and Redemptions	1.22%	-0.11%	0.57%
Markit iBoxx USD Liquid Leveraged Loan Index (reflects no deduction for fees, expenses or taxes)	2.76%	2.74%	2.93%

After-tax returns in the table above are shown on a before- and after-tax returns basis for the Fund. After-tax returns are

calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. For example, after-tax returns shown are not relevant to investors who hold Fund shares through tax-advantaged arrangements, such as 401(k) plans or individual retirement accounts.

In some cases, average annual return after taxes on distributions and sale of fund shares may be higher than the average annual return after taxes on distributions because of realized losses that would have been sustained upon the sale of fund shares immediately after the relevant periods. The calculations assume that an investor holds the shares in a taxable account, is in the actual historical highest individual federal marginal income tax bracket for each year and would have been able to immediately utilize the full realized loss to reduce his or her federal tax liability. However, actual individual tax results may vary and investors should consult their tax advisers regarding their personal tax situations.

Portfolio Management

NexPoint Asset Management, L.P. serves as the investment adviser to the Fund.

The portfolio manager for the Fund is Matt Pearson. Mr. Pearson has managed the Fund since January 2021:

Portfolio Manager	Portfolio Manager Experience in this Fund	Title with Adviser
Matt Pearson	1 year	Portfolio Manager and Equity Trader

Purchase and Sale of Fund Shares

The Fund is an exchange-traded fund. The Fund will issue and redeem shares only to authorized participants who have entered into agreements with the Fund's distributor ("Authorized Participants") in exchange for the deposit or delivery of a basket of assets (securities and/or cash) in large blocks, known as Creation Units, each of which comprises 100,000 shares. Retail investors may only purchase and sell shares on a national securities exchange through a broker-dealer. The price of Fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of a Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the "bid-ask spread"). Recent information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spreads is available at www.nexpointassetmgmt.com/snln-etf/.

Important Additional Information

Tax Information

The Fund intends to make distributions that generally will be taxable to you as ordinary income or capital gains, unless you are a tax-exempt investor or otherwise investing in the Fund through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. If you are investing in the Fund through a tax-advantaged arrangement, you may be taxed later upon withdrawals from that account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Description of Underlying Index

Additional information about the Fund's Underlying Index construction is set forth below.

Highland/iBoxx Senior Loan Index

The Underlying Index of the Fund is a subset of the benchmark Markit iBoxx USD Leveraged Loan Index (USD LLI), and is designed to track the broader market with a smaller subset of index constituents. Constituents are calculated at the end of each business day and re-balanced at the end of each month.

The selection process will involve the identification of the eligible universe using the following eligibility criteria: loan type, minimum size, liquidity/depth of market, spread, credit rating, and minimum time to maturity. If the size of the eligible universe is greater than the target number of loans, the liquidity ranking procedure will be used to determine the final index constituents. Only USD-denominated loans are eligible for the index. A minimum facility size of USD \$500mm nominal is required to be eligible for the index. The liquidity check is based on the 3-month period prior to the rebalancing cut-off date (liquidity test period). Only loans with a minimum liquidity/depth of 2 for at least 50% of trading days of the liquidity test period are eligible for the indices. Loans issued less than 3 months prior to the rebalancing cut-off date require a minimum liquidity/depth of 3 for at least 50% of trading days in the period from the issue date to the rebalancing cut-off date. Only sub-investment grade loans are eligible for the index (including defaulted loans). Rated loans must have a minimum current spread of 125 basis points over LIBOR to be eligible for the index. A minimum initial time to maturity of 1 year is required for potential constituents.

The target number of loans is 100. Loans will be removed from the index if they are no longer present in the current eligible universe or are not ranked within the first 125 places in terms of 3 month average liquidity score. On every subsequent rebalancing, the number of new loans to be selected will be equal to the number of loans which will be removed from the index.

As of June 30, 2022, the Underlying Index included 100 securities with a weighted average facility size of \$2.87 billion. These amounts are subject to change.

Description of Principal Investments

Investment Objective. The investment objective of the Fund is to provide investment results that, before fees and expenses, correspond generally to the price and yield performance of the Markit iBoxx USD Liquid Leveraged Loan Index (the "Underlying Index"). The Board of Trustees can change the Fund's investment objective and strategies without shareholder approval.

The following is a description of principal investment practices in which the Fund may engage. Any references to investments made by the Fund include those that may be made both directly by the Fund and indirectly by the Fund (e.g., through its investments in derivatives or other pooled investment vehicles). Please see "Principal Risks" below for the risks associated with each of the principal investment practices.

Assignments. The Fund may purchase Assignments from Lenders. The purchaser of an Assignment typically succeeds to all the rights and obligations under the Loan Agreement of the assigning Lender and becomes a Lender under the Loan Agreement with the same rights and obligations as the assigning Lender.

Borrower Credit Ratings. The Fund may invest in debt securities and/or Senior Loans rated below investment grade by a NRSRO and unrated debt securities of comparable quality. Debt securities rated below investment grade (or unrated debt securities of comparable quality) commonly are referred to as "junk" securities. The Fund seeks to invest in debt securities and/or Senior Loans which, in the judgment of the Adviser, demonstrate one or more of the following characteristics: sufficient cash flow to service debt; adequate liquidity; successful operating history; strong competitive position; experienced management; and, with respect to collateralized Senior Loans, collateral coverage that equals or exceeds the outstanding principal amount of the Senior Loan. The Fund may, however, invest without limitation in loans and/or debt securities that do not exhibit all or any of these characteristics. In addition, the Adviser will consider, and may rely in part on, with respect to Senior Loans, the analyses performed by the Agent and other Lenders, including such persons' determinations with respect to collateral securing a Senior Loan.

Bridge Financing. The Fund may acquire interests in Senior Loans that are designed to provide temporary or "bridge" financing to a Borrower pending the sale of identified assets or the arrangement of longer-term loans or the issuance and sale of debt obligations. A Borrower's use of a bridge loan involves a risk that the Borrower may be unable to locate permanent financing to replace the bridge loan, which may impair the Borrower's perceived creditworthiness and increase the likelihood that an event of default would be declared.

Commitments to Make Additional Payments. A Lender may have obligations pursuant to a Loan Agreement to make additional loans in certain circumstances. Such circumstances may include, without limitation, obligations under revolving credit facilities and facilities that provide for further loans to Borrowers based upon compliance with specified financial requirements. The Fund currently intends to reserve against

Description of Principal Investments

any such contingent obligation by segregating a sufficient amount of cash and/or liquid securities (including liquid Senior Loans). The Fund will not purchase interests in Senior Loans that would require the Fund to make any such additional loans if the aggregate of such additional loan commitments would exceed 20% of the Fund's total assets or would cause the Fund to fail to meet the diversification requirements set forth under the heading "Investment Restrictions" in the Fund's SAI.

Debt Restructuring. The Fund may purchase and retain in its portfolio an interest in a Senior Loan to a Borrower that has filed for protection under the federal bankruptcy laws or has had an involuntary bankruptcy petition filed against it by its creditors. The Adviser's decision to purchase or retain such an interest will depend on its assessment of the suitability of such investment for the Fund, the Borrower's ability to meet debt service on Senior Loan interests, the likely duration, if any, of a lapse in the scheduled repayment of principal, and prevailing interest rates. At times, in connection with the restructuring of a Senior Loan either outside of bankruptcy court or in the context of bankruptcy court proceedings, the Fund may determine or be required to accept equity securities or junior debt securities in exchange for all or a portion of a Senior Loan interest. Depending upon, among other things, the Adviser's evaluation of the potential value of such securities in relation to the price that could be obtained by the Fund at any given time upon sale thereof, the Fund may determine to hold such securities in its portfolio.

Debt Securities. The Fund may invest in debt securities, including investment grade securities, below investment grade securities and other debt obligations.

- **Investment Grade Securities.** The Fund may invest in a wide variety of bonds that are rated or determined by the Adviser to be of investment grade quality of varying maturities issued by U.S. corporations and other business entities. Bonds are fixed or variable rate debt obligations, including bills, notes, debentures, money market instruments and similar instruments and securities. Bonds generally are used by corporations and other issuers to borrow money from investors for a variety of business purposes. The issuer pays the investor a fixed or variable rate of interest and normally must repay the amount borrowed on or before maturity.
- **Below Investment Grade Securities.** The Fund may invest in below investment grade securities (also known as "high-yield securities" or "junk securities"). See "High-Yield Debt Securities Risk" below for more information.

Derivatives. The Fund may invest in various instruments that are commonly known as derivatives. Generally, derivatives financial instrument, the value of which is based on, or "derived" from, the value of underlying securities,

commodities, currencies, indices, or other assets or instruments, including other derivative contracts. The most common types of derivatives are swaps, futures and options, and major asset classes include interest rates, equities, commodities and foreign exchange. Futures, forwards, swaps and options are commonly used for traditional hedging purposes, among other purposes, to attempt to protect the Fund from exposure to changing interest rates, securities prices, or currency exchange rates and as a low-cost method of gaining exposure to a particular securities market without investing directly in those securities. The Fund may enter into credit derivatives, such as credit default swaps and credit default index investments, including loan credit default swaps and loan credit default index swaps. The Fund may use these investments (i) as alternatives to direct long or short investments in a particular security, (ii) to adjust the Fund's asset allocation or risk exposure, or (iii) for hedging purposes. The Fund may invest in warrants and may also use derivatives, primarily swaps (including equity, variance and volatility swaps), and options and futures contracts on securities, interest rates, non-physical commodities and/or currencies, with the 20% basket to track the Underlying Index and as substitutes for direct investments the Fund can make. The Fund may also use derivatives such as swaps, options (including options on futures), futures, and foreign currency transactions (e.g., foreign currency swaps, futures and forwards) to hedge various investments for risk management and speculative purposes.

The Fund's use of credit default swaps may have the effect of creating a short position in a security. These investments can create investment leverage, which tends to magnify the effects of an instrument's price changes as market conditions change. Special tax considerations apply to the Fund's use of derivatives. See the "Taxation" section below.

Exchange-Traded Funds. The Fund may invest in other ETFs. ETFs are listed on various exchanges and typically seek to provide investment results that correspond generally to the performance of specified market indices.

Fees. The Fund may be required to pay or may receive various fees and commissions in connection with purchasing, selling and holding interests in Senior Loans. The fees normally paid by Borrowers may include commitment fees and prepayment penalties. Commitment fees are paid to Lenders on an ongoing basis based upon the undrawn portion committed by the Lenders of the underlying Senior Loan. Lenders may receive prepayment penalties when a Borrower prepays all or part of a Senior Loan. The Fund will receive commitment fees and prepayment penalties directly from the Borrower, if the Fund acquires an interest in a Senior Loan by way of Assignment. Whether or not the Fund receives any fees depends upon negotiations between the Fund and the Lender selling the Senior Loan interests. When the Fund is an

assignee, it may be required to pay a fee to, or forgo a portion of interest and any fees payable to it from, the Lender selling the Assignment. Occasionally, the assignor will pay a fee to the Fund based on the portion of the principal amount of the Senior Loan that is being assigned. A Lender selling a Participation to the Fund may deduct a portion of the interest and any fees payable to the Fund as an administrative fee prior to payment thereof to the Fund. The Fund may be required to pay over or pass along to a purchaser of an interest in a Senior Loan from the Fund a portion of any fees that the Fund would otherwise be entitled to.

Illiquid and Restricted Securities. The Fund may invest in illiquid and restricted securities. Restricted securities generally may not be resold without registration under the Securities Act of 1933, as amended (the "Securities Act"), except in transactions exempt from the registration requirements of the Securities Act. A security that may be restricted as to resale under federal securities laws (or otherwise) will not be subject to the applicable percentage limitation if the Adviser determines that the security is, at the time of acquisition, readily marketable. Illiquid securities are those that cannot be sold or disposed of within seven calendar days or less without the sale or disposition significantly changing the market value of the investment. Illiquid and restricted securities may offer higher returns and yields than comparable publicly-traded securities. However, the Fund may not be able to sell these securities when the Adviser considers it desirable to do so or, to the extent they are sold privately, may have to sell them at less than the price of otherwise comparable securities. Restricted securities may be illiquid; however, some restricted securities, such as those eligible for resale under Rule 144A under the Securities Act, may be treated as liquid.

Options. The Fund may utilize options on securities, indices and currencies as part of its principal investment strategies. An option on a security is a contract that gives the holder of the option, in return for a premium, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option at a specified exercise or "strike" price. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price or to pay the exercise price upon delivery of the underlying security. If an option written by the Fund expires unexercised, the Fund realizes on the expiration date a gain equal to the premium received by the Fund at the time the option was written. If an option purchased by the Fund expires unexercised, the Fund realizes a loss equal to the premium paid. Prior to the earlier of exercise or expiration, an exchange-traded option may be closed out by an offsetting purchase or sale of an option of the same series (type, underlying security, exercise price and expiration).

There can be no assurance, however, that a closing purchase or sale transaction can be effected when the Fund desires. The Fund realizes an economic loss from a closing sale transaction if the premium received from the sale of the option is less than the premium it initially paid to purchase the option (plus transaction costs). The Fund realizes an economic loss from a closing purchase transaction if the cost of the closing purchase transaction (premium plus transaction costs) is greater than the premium initially received from writing the option.

Participations. The Fund may invest without limit in Participations. The selling Lenders and other persons interpositioned between such Lenders and the Fund with respect to Participations will likely conduct their principal business activities in the financial services industry. The Fund may be more susceptible than an investment company that does not invest in Participations in Senior Loans to any single economic, political or regulatory occurrence affecting this industry. Persons engaged in this industry may be more susceptible than are persons engaged in some other industries to, among other things, fluctuations in interest rates, changes in the Federal Open Market Committee's monetary policy, governmental regulations concerning such industries and concerning capital raising activities generally and fluctuations in the financial markets generally.

Participation by the Fund in a Lender's portion of a Senior Loan typically will result in the Fund having a contractual relationship only with such Lender, not with the Borrower. As a result, the Fund may have the right to receive payments of principal, interest and any fees to which it is entitled only from the Lender selling the Participation and only upon receipt by the Lender of payments from the Borrower. In connection with purchasing Participations, the Fund generally will have no right to enforce compliance by the Borrower with the terms of the Loan Agreement, nor any rights with respect to any funds acquired by other Lenders through set-off against the Borrower, and the Fund may not directly benefit from the collateral supporting the Senior Loan in which it has purchased the Participation. As a result, the Fund may assume the credit risk of both the Borrower and the Lender selling the Participation. In the event of the insolvency of the Lender selling a Participation, the Fund may be treated as a general creditor of the Lender, and may not benefit from any set-off between the Lender and the Borrower. The Fund will only acquire Participations from counterparties that are judged by the Adviser to present acceptable credit risk to the Fund.

Portfolio Maturity. Although the initial time to maturity for Component Securities in the Underlying Index will generally be at least one year, the Fund is not subject to any restrictions with respect to the maturity of Senior Loans held in its portfolio. Senior Loans usually will have rates of interest

Description of Principal Investments

that are redetermined periodically. Investment in Senior Loans with longer interest rate redetermination periods may increase fluctuations in the Fund's NAV and the market price of the Fund's shares as a result of changes in interest rates. Because many Senior Loans in the investment portfolio will be subject to mandatory and/or optional prepayment and there may be significant economic incentives for a Borrower to prepay its loans, prepayments of Senior Loans in the Fund's investment portfolio may occur. Accordingly, the actual remaining maturity of the Fund's investment portfolio invested in Senior Loans may vary substantially from the average stated maturity of the Senior Loans held in the Fund's investment portfolio.

Prepayments. Pursuant to the relevant Loan Agreement, a Borrower may be required, and may have the option at any time, to prepay the principal amount of a Senior Loan, often without incurring a prepayment penalty. In the event that like-yielding loans are not available in the marketplace, the prepayment of and subsequent reinvestment by the Fund in Senior Loans could have a materially adverse effect on the yield of the Fund's investment portfolio. Prepayments may have a beneficial impact on income due to receipt of prepayment penalties, if any, and any facility fees earned in connection with reinvestment.

Senior Loans. The Fund may invest in Senior Loans. Senior Loans generally are arranged through private negotiations between a Borrower and Lenders represented in each case by one or more Agents of the several Lenders. On behalf of the several Lenders, the Agent, which is frequently a commercial bank or other entity that originates the Senior Loan and the person that invites other parties to join the lending syndicate, will be primarily responsible for negotiating the Loan Agreement that establishes the relative terms, conditions and rights of the Borrower and the several Lenders. In larger transactions it is common to have several Agents; however, generally only one such Agent has primary responsibility for documentation and administration of a Senior Loan.

In a typical Senior Loan, the Agent administers the terms of the Loan Agreement and is responsible for the collection of principal and interest and fee payments from the Borrower and the apportionment of those payments to the credit of all Lenders that are parties to the Loan Agreement. The Fund generally will rely on the Agent to collect its portion of the payments on a Senior Loan. Furthermore, the Fund will rely on the Agent to use appropriate creditor remedies against the Borrower. Typically, under a Loan Agreement, the Agent is given broad discretion in monitoring the Borrower's performance under the Loan Agreement and is obligated to use only the same care it would use in the management of its own property. Upon an event of default, the Agent typically will act to enforce the Loan Agreement after instruction from Lenders holding a majority of the Senior Loan. The Borrower

compensates the Agent for the Agent's services. This compensation may include special fees paid on structuring and funding the Senior Loan and other fees paid on a continuing basis. The practice of an Agent relying exclusively or primarily on reports from the Borrower may involve a risk of fraud by the Borrower.

Loan Agreements typically provide for the termination of the Agent's agency status in the event that it fails to act as required under the relevant Loan Agreement, becomes insolvent, enters receivership of the Federal Deposit Insurance Corporation ("FDIC"), or, if not FDIC insured, enters into bankruptcy. Should an Agent, Lender or any other institution interpositioned between the Fund and the Borrower become insolvent or enter FDIC receivership or bankruptcy, any interest in the Senior Loan of any such interpositioned institution and any loan payment held by any such interpositioned institution for the benefit of the Fund should not be included in the estate of such interpositioned institution. If, however, any such amount were included in such interpositioned institution's estate, the Fund would incur costs and delays in realizing payment or could suffer a loss of principal or interest. In such event, the Fund could experience a decrease in NAV.

It is anticipated that the proceeds of the Senior Loans in which the Fund will acquire interests primarily will be used to finance leveraged buyouts, recapitalizations, mergers, acquisitions, stock repurchases, and, to a lesser extent, to finance internal growth and for other corporate purposes of Borrowers. Senior Loans have the most senior position in a Borrower's capital structure, although some Senior Loans may hold an equal ranking with other senior securities and certain other obligations of the Borrower. The capital structure of a Borrower may include Senior Loans, senior and junior subordinated debt securities (which may include "junk" securities) and preferred and common stock issued by the Borrower, typically in descending order of seniority with respect to claims on the Borrower's assets. Senior and junior subordinated debt is collectively referred to in this Prospectus as "junior debt securities."

Senior Loans generally are secured by specific collateral. The Fund may invest without limitation in Senior Loans that are not secured by any collateral and, to the extent that the Fund invests a portion of its assets in Senior Loans that are not secured by specific collateral, the Fund will not enjoy the benefits associated with collateralization with respect to such Senior Loans, and such Senior Loans may pose a greater risk of nonpayment of interest or loss of principal than do collateralized Senior Loans. As discussed below, the Fund may also acquire warrants, equity securities and junior debt securities issued by the Borrower or its affiliates as part of a package of investments in the Borrower or its affiliates. The Fund may acquire interests in warrants, other equity

securities or junior debt securities through a negotiated restructuring of a Senior Loan or in a bankruptcy proceeding of the Borrower.

In order to borrow money pursuant to a collateralized Senior Loan, a Borrower will typically, for the term of the Senior Loan, pledge assets as collateral. In addition, in the case of some Senior Loans, there may be additional collateral pledged in the form of guarantees by and/or securities of affiliates of the Borrowers. In some instances, a collateralized Senior Loan may be secured only by stock in the Borrower or its subsidiaries. Collateral may consist of assets that are not readily liquidated, and there is no assurance that the liquidation of such assets would fully satisfy a Borrower's obligations under a Senior Loan. Similarly, in the event of bankruptcy proceedings involving the Borrower, the Lenders may be delayed or prevented from liquidating collateral or may choose not to do so as part of their participation in a plan of reorganization of the Borrower. Senior Loans' higher standing in an issuer's capital structure has historically resulted in generally higher recoveries than other below investment grade securities in the event of a corporate reorganization or other restructuring, but there can be no assurance that this will be the case with respect to any particular Senior Loan.

Loan Agreements may also include various restrictive covenants designed to limit the activities of the Borrower in an effort to protect the right of the Lenders to receive timely payments of interest on and repayment of principal of the Senior Loans. Breach of such a covenant, if not waived by the Lenders, is generally an event of default under the applicable Loan Agreement and may give the Lenders the right to accelerate principal and interest payments. The Adviser will consider the terms of restrictive covenants in deciding whether to invest in Senior Loans for the Fund's investment portfolio. When the Fund holds a Participation in a Senior Loan, it may not have the right to vote to waive enforcement of a restrictive covenant breached by a Borrower. Lenders voting in connection with a potential waiver of a restrictive covenant may have interests different from those of the Fund, and such Lenders will not consider the interests of the Fund in connection with their votes.

Senior Loans in which the Fund will invest generally pay interest at rates that are periodically redetermined by reference to a base lending rate plus a premium. These base lending rates generally are the LIBOR, the prime rate offered by one or more major United States banks ("Prime Rate") or the certificate of deposit ("CD") rate or other base lending rates used by commercial Lenders. LIBOR generally is an average of the interest rates quoted by several designated banks as the rates at which such banks would offer to pay interest to major financial institution depositors in the London interbank market on U.S. dollar denominated

deposits for a specified period of time. The CD rate generally is the average rate paid on large certificates of deposit traded in the secondary market. Senior Loans traditionally have been structured so that Borrowers pay higher premiums when they elect LIBOR, in order to permit Lenders to obtain generally consistent yields on Senior Loans, regardless of whether Borrowers select the LIBOR option or the Prime Rate option. Because their interest rates are adjusted for changes in short-term interest rates, Senior Loans generally have less interest rate risk than other high yield investments, which typically pay fixed rates of interest. On July 27, 2017, the head of the United Kingdom's Financial Conduct Authority announced that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. Due to this announcement, there remains uncertainty regarding the future utilization of LIBOR and the nature of any replacement rate. As such, the potential effect of a transition away from LIBOR on the Fund or the financial instruments in which the Fund invests cannot yet be determined. A successor rate could impact the liquidity and potentially the value of investments that reference LIBOR.

The Fund may invest in Participations in Senior Loans and may purchase Assignments of portions of Senior Loans from third parties.

Senior Loan Ratings. The Fund may invest all or substantially all of its assets in Senior Loans that are rated below investment grade, including Senior Loans rated CCC or below by S&P or Caa or below by Moody's, and unrated Senior Loans of comparable quality.

Additional Information. The foregoing percentage limitations in the Fund's investment strategies apply at the time of purchase of securities. The Board may change any of the foregoing investment policies, including the Fund's investment objective, the Underlying Index and the Fund's 80% investment policy, without shareholder approval. The Fund will provide shareholders with written notice at least 60 days prior to investing less than 80% of its assets, under normal circumstances, in component securities of the Fund's Underlying Index. For example, if the Fund's Underlying Index is discontinued by its Index Provider, the license agreement for the Underlying Index is terminated by the Index Provider or the Board determines that it would not be beneficial to shareholders for the Fund to continue operations using the Underlying Index, the Board may change the Underlying Index as described in the "Investment Restrictions" section of the Fund's SAI.

In addition to its 80% investment policy described above, the Fund is subject to the SEC's "names rule" (Rule 35d-1 under the 1940 Act), and therefore will invest at least 80% of its assets (i.e., net assets plus borrowings for investment purposes), under normal circumstances, in Senior Loans.

Description of Principal Investments

Senior Loans, at the time of the Fund's purchase, have the most senior position in a Borrower's capital structure or share the senior position with other senior debt securities of the Borrower. The Fund will provide shareholders with written notice at least 60 days prior to investing less than 80% of its assets, under normal circumstances, in Senior Loans.

If the Fund's shares are delisted, the Board may seek to list its shares on another exchange, merge with another ETF or traditional mutual fund or redeem its shares at NAV.

Description of Risks

Factors that may affect the Fund's portfolio as a whole are called "principal risks" and are summarized in this section. This summary describes the nature of these principal risks and certain related risks, but is not intended to include every potential risk. The Fund could be subject to additional risks because the types of investments it makes may change over time. The SAI includes more information about the Fund and its investments. The Fund is not intended to be a complete investment program.

Asset Class Risk. The securities in the Underlying Index or in the Fund's portfolio may underperform the returns of other securities or indices that track other countries, regions, industries, groups of industries, markets, asset classes or sectors. Various types of securities or indices tend to experience cycles of outperformance and underperformance in comparison to general securities markets.

Cash Transaction Risk. Unlike most ETFs, the Fund effects creations and redemptions principally for cash, rather than for in-kind securities, because of the nature of the Fund's investments. ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the fund level. Because the Fund currently intends to effect redemptions principally for cash, rather than principally for in-kind securities, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind, and this may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Commodities Risk. Commodities markets historically have been extremely volatile, and the performance of securities and other instruments that provide exposure to those markets therefore also may be highly volatile. The commodities markets may fluctuate widely based on a variety of factors. These include changes in overall market movements, domestic and foreign political and economic events and policies, war, acts of terrorism, changes in domestic or foreign interest rates and/or investor

expectations concerning interest rates, domestic and foreign inflation rates and/or investor expectations concerning inflation rates and investment and trading activities of mutual funds, hedge funds and commodities funds. Commodity-linked derivative instruments have a high degree of price variability and are subject to rapid and substantial price changes. Commodity-linked derivative instruments may employ leverage, which creates the possibility for losses greater than the amount invested.

Counterparty Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest, settlement or margin payments, or otherwise honor its obligations. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund's income or the value of its assets may decrease. The Fund may experience significant delays in obtaining any recovery in a bankruptcy or other reorganization proceeding and the Fund may obtain only limited recovery or may obtain no recovery in such circumstances. In an attempt to limit the counterparty risk associated with such transactions, the Fund conducts business only with financial institutions judged by the Adviser to present acceptable credit risk.

Covenant-Lite Loans Risk. Loans in which the Fund invests include covenant-lite loans, which carry more risk to the lender than traditional loans as they may contain fewer or less restrictive covenants on the borrower than traditionally included in loan documentation or may contain other borrower-friendly characteristics. The Fund may experience relatively greater difficulty or delays in enforcing its rights on its holdings of certain covenant-lite loans and debt securities than its holdings of loans or securities with the usual covenants.

Credit Risk. The value of debt securities owned by the Fund may be affected by the ability of issuers to make principal and interest payments and by the issuer's or counterparty's credit quality. If an issuer cannot meet its payment obligations or if its credit rating is lowered, the value of its debt securities may decline. Lower quality bonds are generally more sensitive to these changes than higher quality bonds. Even within securities considered investment grade, differences exist in credit quality and some investment-grade debt securities may have speculative characteristics. A security's price may be adversely affected by the market's perception of the security's credit quality level even if the issuer or counterparty has suffered no degradation in its ability to honor the obligation.

Credit risk varies depending upon whether the issuers of the securities are corporations or domestic or foreign governments or their sub-divisions or instrumentalities and whether the particular note or other instrument held by the Fund has a priority in payment of principal and interest. U.S. government securities are subject to varying degrees of credit risk depending upon whether the securities are supported by the full faith and credit of the United States, supported by the ability to borrow from the U.S. Treasury, supported only by the credit of the issuing U.S. government agency, instrumentality, or corporation, or otherwise supported by the United States. Obligations issued by U.S. government agencies, authorities, instrumentalities or sponsored enterprises, such as Government National Mortgage Association, are backed by the full faith and credit of the U.S. Treasury, while obligations issued by others, such as Federal National Mortgage Association (“FNMA”), Federal Home Loan Mortgage Corporation (“Freddie Mac”) and Federal Home Loan Banks (“FHLBs”), are backed solely by the ability of the entity to borrow from the U.S. Treasury or by the entity’s own resources. No assurance can be given that the U.S. government would provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Debt Securities and Leveraged Loan Risk. The value of a debt security (and other income-producing securities, such as preferred stocks, convertible preferred stocks, equity-linked notes, and interests in income-producing trusts) changes in response to interest rate changes. In general, the value of a debt security is likely to fall as interest rates rise. This risk is generally greater for obligations with longer maturities or for debt securities that do not pay current interest (such as zero-coupon securities). Debt securities with floating interest rates can be less sensitive to interest rate changes, although, to the extent the Fund’s income is based on short-term interest rates that fluctuate over short periods of time, income received by the Fund may decrease as a result of a decline in interest rates. In addition, the interest rates of floating rate loans typically only adjust to changes in short-term interest rates; long-term interest rates can vary dramatically from short-term interest rates. In response to an interest rate decline, debt securities that provide the issuer with the right to call or redeem the security prior to maturity may be called or redeemed.

If a debt security is repaid more quickly than expected, the Fund may not be able to reinvest the proceeds at the same interest rate, reducing the potential for gain. When interest rates increase or for other reasons, debt securities may be repaid more slowly than expected. As a result, the maturity of the debt instrument is extended, increasing the potential for loss.

Beginning in March 2022, the U.S. Federal Reserve (the “Fed”) began increasing interest rates and has signaled the potential for further increases. It is difficult to accurately predict the pace at which the Fed will increase interest rates any further, or the timing, frequency or magnitude of any such increases, and the evaluation of macro-economic and other conditions could cause a change in approach in the future. Any such increases generally will cause market interest rates to rise, which will cause the value of the Fund’s debt securities to fall. Rising market interest rates could have unpredictable effects on the markets and may expose fixed-income and related markets to heightened volatility, which could reduce liquidity for certain investments, adversely affect values, and increase costs. Increased redemptions may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so and may lower returns. If dealer capacity in fixed-income and related markets is insufficient for market conditions, it may further inhibit liquidity and increase volatility in the fixed-income and related markets. Further, potential future changes in government policy may affect interest rates.

The value of a debt security also depends on the issuer’s credit quality or ability to pay principal and interest when due. The value of a debt security is likely to fall if an issuer or the guarantor of a security is unable or unwilling (or perceived to be unable or unwilling) to make timely principal and/or interest payments or otherwise to honor its obligations, or if the debt security’s rating is downgraded by a credit rating agency. The obligations of issuers (and obligors of asset-backed securities) are subject to bankruptcy, insolvency, and other laws affecting the rights and remedies of creditors. The value of a debt security can also decline in response to other changes in market, economic, industry, political, and regulatory conditions that affect a particular type of debt security or issuer or debt securities generally. The values of many debt securities may fall in response to a general increase in investor risk aversion or a decline in the confidence of investors generally in the ability of issuers to meet their obligations.

Leveraged Loans are subject to the same risks typically associated with debt securities. In addition, Leveraged Loans, which typically hold a senior position in the capital structure of a borrower, are subject to the risk that a court could subordinate such loans to presently existing or future indebtedness or take other action detrimental to the holders of Leveraged Loans. Leveraged Loans are also especially subject to the risk that the value of the collateral, if any, securing a loan may decline, be insufficient to meet the obligations of the borrower, or be difficult to liquidate.

Because loans are not ordinarily registered with the SEC or any state securities commission or listed on any securities exchange, there is usually less publicly available information

Description of Risks

about such instruments. In addition, loans may not be considered “securities” for purposes of the federal securities laws and, as a result, as a purchaser of these instruments, the Fund may not be entitled to the anti-fraud protections of the federal securities laws. In the course of investing in such instruments, the Fund may come into possession of material nonpublic information and, because of prohibitions on trading in securities of issuers while in possession of such information, it may be unable to enter into a transaction in a publicly-traded security of that issuer when it would otherwise be advantageous for it to do so. Alternatively, the Fund may choose not to receive material nonpublic information about an issuer of such loans, with the result that it may have less information about such issuers than other investors who transact in such assets.

Derivatives Risk. The Fund may invest in derivatives, which are financial contracts whose value depends on, or is derived from, the value of underlying securities, commodities, currencies, indices, or other assets or instruments, including other derivative contracts. The most common types of derivatives are swaps, futures and options, and major asset classes include interest rates, equities, commodities and foreign exchange. Derivatives involve the risk that changes in their value may not move as expected relative to the value of the assets, rates or indices they are designed to track.

There are several risks associated with derivatives transactions. The use of derivatives involves risks that are in addition to, and potentially greater than, the risks of investing directly in securities and other more traditional assets. A decision as to whether, when and how to use derivatives involves the exercise of skill and judgment, and even a well-conceived transaction may be unsuccessful to some degree because of market behavior or unexpected events.

The use of derivative transactions may result in losses greater than if they had not been used, may require the Fund to sell or purchase portfolio securities at inopportune times or for prices other than current market values, may limit the amount of appreciation the Fund can realize on an investment or may cause the Fund to hold a security that it might otherwise sell. The Fund may enter into credit derivatives, such as credit default swaps and credit default index investments, including loan credit default swaps and loan credit default index swaps. The Fund’s use of credit default swaps may have the effect of creating a short position in a security. These investments can create investment leverage and may create additional investment risks that may subject the Fund to greater volatility than investments in more traditional securities. Derivative contracts may expire worthless.

The Fund may invest in derivatives with a limited number of counterparties, and events affecting the creditworthiness of

any of those counterparties may have a pronounced effect on the Fund. Derivatives risk is particularly acute in environments (like those of 2008) in which financial services firms are exposed to systemic risks of the type evidenced by the insolvency of Lehman Brothers and subsequent market disruptions. In addition, during those periods, the Fund may have a greater need for cash to provide collateral for large swings in its mark-to-market obligations under the derivatives in which it has invested.

The Fund’s use of derivatives may not be effective or have the desired results. Moreover, suitable derivatives will not be available in all circumstances. For example, the economic costs of taking some derivative positions may be prohibitive, and if a counterparty or its affiliate is deemed to be an affiliate of the Fund, the Fund will not be permitted to trade with that counterparty. In addition, the Adviser may decide not to use derivatives to hedge or otherwise reduce the Fund’s risk exposures, potentially resulting in losses for the Fund.

Swap contracts and other OTC derivatives are highly susceptible to liquidity risk (see “Liquidity Risk”) and counterparty risk (see “Counterparty Risk”), and are subject to documentation risks. Because many derivatives have a leverage component (i.e., a notional value in excess of the assets needed to establish and/or maintain the derivative position), adverse changes in the value or level of the underlying asset, rate or index may result in a loss substantially greater than the amount invested in the derivative itself. See “Leverage Risk” below.

Derivatives also present other risks described in this section, including securities market risk, liquidity risk, currency risk, credit risk and counterparty risk. Special tax considerations apply to the Fund’s use of derivatives. See the “Taxation” section below.

In accordance with rules and regulations enacted by the Commodity Futures Trading Commission (the “CFTC”) under the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”), transactions in some types of swaps (including certain classes of interest rate swaps and credit default swaps) are required to be centrally cleared (“cleared derivatives”), through a central clearinghouse known as a derivatives clearing organization, however, the CFTC is expected to impose a mandatory central clearing requirement for additional derivative instruments over time. In a transaction involving cleared derivatives, the Fund’s counterparty is a clearing house, rather than a bank or broker. To clear a swap through a derivatives clearing organization, the Fund will submit the contract to, and post margin with, a futures commission merchant (FCM) that is a clearinghouse member. The Fund may enter into the swap with a counterparty other than the FCM and arrange for the

contract to be transferred to the FCM for clearing, or enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC's regulations also generally require that the swap be executed on a registered exchange (either a designated contract market or swap execution facility).

In many ways, cleared derivative arrangements are less favorable to mutual funds than bilateral arrangements. For example, the Fund may be required to provide more margin for cleared derivatives transactions than for bilateral derivatives transactions. Also, in contrast to a bilateral derivatives transaction, following a period of notice to the Fund, a clearing member generally can require termination of an existing cleared derivatives transaction at any time or an increase in margin requirements above the margin that the clearing member required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing transactions or to terminate those transactions at any time. Any increase in margin requirements or termination of existing cleared derivatives transactions by the clearing member or the clearing house could interfere with the ability of the Fund to pursue its investment strategy. Further, any increase in margin requirements by a clearing member could expose the Fund to greater credit risk to its clearing member, because margin for cleared derivatives transactions in excess of a clearing house's margin requirements typically is held by the clearing member. Also, the Fund is subject to risk if it enters into a derivatives transaction that is required to be cleared (or that the Adviser expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fund's behalf. In those cases, the transaction might have to be terminated, and the Fund could lose some or all of the benefit of the transaction, including loss of an increase in the value of the transaction and/or loss of hedging protection. In addition, the documentation governing the relationship between the Fund and clearing members is drafted by the clearing members and generally is less favorable to the Fund than typical bilateral derivatives documentation. For example, documentation relating to cleared derivatives generally includes a one-way indemnity by the Fund in favor of the clearing member for losses the clearing member incurs as the Fund's clearing member and typically does not provide the Fund any remedies if the clearing member defaults or becomes insolvent. While futures contracts entail similar risks, the risks likely are more pronounced for cleared swaps due to their more limited liquidity and market history.

As noted above, some types of cleared derivatives are required to be executed on an exchange or on a swap execution facility. A swap execution facility is a trading platform where multiple market participants can execute derivatives by accepting bids and offers made by multiple

other participants in the platform. While this execution requirement is designed to increase transparency and liquidity in the cleared derivatives market, trading on a swap execution facility can create additional costs and risks for a Fund. For example, swap execution facilities typically charge fees, and if a Fund executes derivatives on a swap execution facility through a broker intermediary, the intermediary may impose fees as well. Also, a Fund may indemnify a swap execution facility, or a broker intermediary who executes cleared derivatives on a swap execution facility on the Fund's behalf, against any losses or costs that may be incurred as a result of the Fund's transactions on the swap execution facility.

These and other new rules and regulations could, among other things, further restrict the Fund's ability to engage in, or increase the cost to the Fund of derivatives transactions, for example, by making some types of derivatives no longer available to the Fund, increasing margin or capital requirements, or otherwise limiting liquidity or increasing transaction costs. At this point in time, most of the Dodd-Frank Act has been fully implemented, though a small number of remaining rulemakings are unfinished or are subject to further final rulemaking or phase-in periods. Any future regulatory or legislative activity would not necessarily have a direct, immediate effect upon the Fund, though it is within the realm of possibility that, upon implementation of these measures or any future measures, they could potentially limit or completely restrict the ability of the Fund to use these instruments as a part of its investment strategy, increase the costs of using these instruments or make them less effective. While the new regulations and central clearing of some derivatives transactions are designed to reduce systemic risk (i.e., the risk that the interdependence of large derivatives dealers could cause them to suffer liquidity, solvency or other challenges simultaneously), there is no assurance that the new clearing mechanisms will achieve that result, and in the meantime, as noted above, central clearing exposes the Fund to new kinds of risks and costs.

In particular, effective August 19, 2022 (the "Compliance Date"), Rule 18f-4 under the 1940 Act (the "Derivatives Rule") replaced the asset segregation regime of Investment Company Act Release No. 10666 (Release 10666) with a new framework for the use of derivatives by registered funds. As of the Compliance Date, the SEC rescinded Release 10666 and withdrew no-action letters and similar guidance addressing a fund's use of derivatives and began requiring funds to satisfy the requirements of the Derivatives Rule. As a result, on or after the Compliance Date, the Fund will no longer engage in "segregation" or "coverage" techniques with respect to derivatives transactions and will instead comply with the applicable requirements of the Derivatives Rule.

Description of Risks

The Derivatives Rule mandates that a fund adopt and/or implement: (i) value-at-risk limitations (VaR); (ii) a written derivatives risk management program; (iii) new Board oversight responsibilities; and (iv) new reporting and recordkeeping requirements. In the event that a fund's derivative exposure is 10% or less of its net assets, excluding certain currency and interest rate hedging transactions, it can elect to be classified as a limited derivatives user (Limited Derivatives User) under the Derivatives Rule, in which case the fund is not subject to the full requirements of the Derivatives Rule. Limited Derivatives Users are excepted from VaR testing, implementing a derivatives risk management program, and certain Board oversight and reporting requirements mandated by the Derivatives Rule. However, a Limited Derivatives User is still required to implement written compliance policies and procedures reasonably designed to manage its derivatives risks.

The Derivatives Rule also provides special treatment for reverse repurchase agreements, similar financing transactions and unfunded commitment agreements. Specifically, a fund may elect whether to treat reverse repurchase agreements and similar financing transactions as "derivatives transactions" subject to the requirements of the Derivatives Rule or as senior securities equivalent to bank borrowings for purposes of Section 18 of the Investment Company Act of 1940. In addition, when-issued or forward settling securities transactions that physically settle within 35-days are deemed not to involve a senior security.

Additional legislation may be enacted subsequent to the date of this Prospectus that could negatively affect the assets of a Fund. Legislation or regulation may change the way in which the Fund itself is regulated. The Adviser cannot predict the effects of any new governmental regulation that may be implemented, and there can be no assurance that any new governmental regulation will not adversely affect the Fund's performance or ability to achieve its investment objectives.

In addition, regulations adopted by the prudential regulators that took effect with regards to most funds in 2019 require certain banks to include in a range of financial contracts, including derivative and short-term funding transactions, terms delaying or restricting a counterparty's default, termination and other rights in the event that the bank and/or its affiliates become subject to certain types of resolution or insolvency proceedings. The regulations could limit a Fund's ability to exercise a range of cross-default rights if its counterparty, or an affiliate of the counterparty, is subject to bankruptcy or similar proceedings. Such regulations could further negatively impact a Fund's use of derivatives.

Distressed and Defaulted Securities Risk. Distressed and defaulted securities risk is the risk that securities of financially distressed and bankrupt issuers, including debt obligations that are in covenant or payment default, will generally trade

significantly below par and are considered speculative. The repayment of defaulted obligations is subject to significant uncertainties. Defaulted obligations might be repaid only after lengthy workout or bankruptcy proceedings, during which the issuer might not make any interest or other payments. Typically, such workout or bankruptcy proceedings result in only partial recovery of cash payments or an exchange of the defaulted obligation for other debt or equity securities of the issuer or its affiliates, which may in turn be illiquid or speculative.

Emerging Markets Risk. The risk of investing in securities of issuers tied economically to emerging markets, which entails all of the risks of investing in securities of non-U.S. issuers detailed below under "Foreign Securities Risk" to a heightened degree. These heightened risks include: (i) greater risks of expropriation, confiscatory taxation, nationalization, and less social, political and economic stability; (ii) the smaller size of the markets for such securities and a lower volume of trading, resulting in lack of liquidity and in price volatility; (iii) greater fluctuations in currency exchange rates; and (iv) certain national policies that may restrict the Fund's investment opportunities, including restrictions on investing in issuers or industries deemed sensitive to relevant national interests.

Exchange-Traded Funds Risk. The value of ETFs can be expected to increase and decrease in value in proportion to increases and decreases in the indices that they are designed to track. The volatility of different index tracking stocks can be expected to vary in proportion to the volatility of the particular index they track. ETFs are traded similarly to stocks of individual companies. Although an ETF is designed to provide investment performance corresponding to its index, it may not be able to exactly replicate the performance of its index because of its operating expenses and other factors.

An investment in an ETF generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objective, strategies, and policies. The price of an ETF can fluctuate within a wide range, and the Fund could lose money investing in an ETF if the prices of the securities owned by the ETF go down. In addition, ETFs are subject to the following risks that do not apply to conventional funds: (1) the market price of the ETF's shares may trade at a discount or a premium to their NAV; (2) an active trading market for an ETF's shares may not develop or be maintained; and (3) trading of an ETF's shares may be halted by the activation of individual or market wide "circuit breakers" (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage), if the shares are delisted from the Exchange without first being listed on another exchange, or if the listing exchange's officials deem such action appropriate

in the interest of a fair and orderly market or to protect investors. In addition, shareholders bear both their proportionate share of the Fund's expenses and similar expenses of the underlying investment company when the Fund invests in shares of another investment company.

Most ETFs are investment companies. Therefore, the Fund's purchases of ETF shares generally are subject to the limitations on, and the risks of, the Fund's investments in other investment companies.

Fixed Income Market Risk. Fixed income securities markets may, in response to governmental intervention, economic or market developments (including potentially a reduction in the number of broker-dealers willing to engage in market-making activity), or other factors, experience periods of increased volatility and reduced liquidity. During those periods, the Fund may experience increased levels of shareholder redemptions, and may have to sell securities at times when it would otherwise not do so, and at unfavorable prices. Fixed income securities may be difficult to value during such periods. In recent periods, governmental financial regulators, including the Fed, have taken steps to maintain historically low interest rates by purchasing bonds. As the Fed "tapers" or reduces the amount of bonds it purchases pursuant to quantitative easing, and/or raises the federal funds target rate, such activities could result in the effects described above, and could have a material adverse effect on prices for fixed income securities and on the management of the Fund.

Beginning in March 2022, the Fed began increasing interest rates and has signaled the potential for further increases. It is difficult to accurately predict the pace at which the Fed will increase interest rates any further, or the timing, frequency or magnitude of any such increases, and the evaluation of macro-economic and other conditions could cause a change in approach in the future. Any such increases generally will cause market interest rates to rise, which will cause the value of a Fund's debt securities to fall. Rising market interest rates could have unpredictable effects on the markets and may expose fixed-income and related markets to heightened volatility, which could reduce liquidity for certain investments, adversely affect values, and increase costs. Increased redemptions may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so and may lower returns. If dealer capacity in fixed-income and related markets is insufficient for market conditions, it may further inhibit liquidity and increase volatility in the fixed-income and related markets. Further, potential future changes in government policy may affect interest rates.

Focused Investment Risk. The Fund's investments in Senior Loans arranged through private negotiations between a Borrower and several financial institutions may expose the Fund to risks associated with the financial services industry.

Financial services companies are subject to extensive government regulation, which can limit both the amounts and types of loans and other financial commitments they can make and the interest rates and fees they can charge. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change. Because financial services companies are highly dependent on short-term interest rates, they can be adversely affected by downturns in the U.S. and foreign economies or changes in banking regulations. Credit losses resulting from financial difficulties of Borrowers can negatively affect financial services companies. Insurance companies can be subject to severe price competition. The financial services industry is currently undergoing relatively rapid change as existing distinctions between financial service segments become less clear. For instance, recent business combinations have included insurance, finance, and securities brokerage under single ownership. Some primarily retail corporations have expanded into the securities and insurance industries. Moreover, the federal laws generally separating commercial and investment banking have been repealed. These changes may make it more difficult for the Adviser to analyze loans in this industry. Additionally, the recently increased volatility in the financial markets and implementation of the recent financial reform legislation may affect the financial services industry as a whole in ways that may be difficult to predict.

Foreign Securities Risk. Investments in securities of non-U.S. issuers involve certain risks not involved in domestic investments (for example, fluctuations in foreign exchange rates (for non-U.S. securities not denominated in U.S. dollars); future foreign economic, financial, political and social developments; nationalization; exploration or confiscatory taxation; smaller markets; different trading and settlement practices; less governmental supervision; and different accounting, auditing and financial recordkeeping standards and requirements) that may result in the Fund experiencing more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. companies. These risks are magnified for investments in issuers tied economically to emerging markets, the economies of which tend to be more volatile than the economies of developed markets. In addition, investments by the Fund in non-U.S. securities may be subject to withholding and other taxes imposed by foreign countries on dividends, interest, capital gains, or other income or proceeds. Those taxes will reduce the Fund's yield on any such securities.

High-Yield Debt Securities Risk. The Fund may invest in below investment grade securities (also known as "high-yield securities" or "junk bonds"). Below investment grade securities may be fixed or variable rate obligations and are rated below investment grade (Ba/BB or lower) by a

Description of Risks

nationally recognized statistical rating organization or are unrated but deemed by the Adviser to be of comparable quality. Such securities should be considered speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation. High-yield debt securities are frequently issued by corporations in the growth stage of their development, but also may be issued by established companies. High-yield securities held by the Fund may include securities received as a result of a corporate reorganization or issued as part of a corporate takeover.

Below investment grade securities have greater credit and liquidity risk than more highly rated obligations and are generally unsecured and may be subordinate to other obligations of the obligor. The lower rating of such securities reflects a greater possibility that adverse changes in the financial condition of the issuer or in general economic conditions (including, for example, a substantial period of rising interest rates or declining earnings) or both may impair the ability of the issuer to make payment of principal and interest. Many issuers of high-yield securities are highly leveraged and their relatively high debt to equity ratios create increased risks that their operations might not generate sufficient cash flow to service their obligations. Overall declines in the below investment grade bond market and other markets may adversely affect such issuers by inhibiting their ability to refinance their obligations at maturity. Investments in obligations of issuers that are generally trading at significantly higher yields than had been historically typical of the applicable issuer's obligations may include debt obligations that have a heightened probability of being in covenant or payment default in the future. Such investments generally are considered speculative. The repayment of defaulted obligations is subject to significant uncertainties. Defaulted obligations might be repaid only after lengthy workout or bankruptcy proceedings, during which the issuer might not make any interest or other payments. Typically, such workout or bankruptcy proceedings result in only partial recovery of cash payments or an exchange of the defaulted security for other debt or equity securities of the issuer or its affiliates, which may in turn be illiquid or speculative. High-yield securities will be subject to certain additional risks to the extent that such obligations may be unsecured and subordinated to substantial amounts of senior indebtedness, all or a significant portion of which may be secured.

Moreover, such obligations may not be protected by financial covenants or limitations upon additional indebtedness and are unlikely to be secured by collateral. See "Taxation" below and "Income Tax Considerations" in the SAI for a discussion of special tax consequences associated with certain below investment grade securities.

Illiquid and Restricted Securities Risk. Illiquid investments may be difficult to resell or dispose of in seven calendar days or less without the sale or disposition significantly changing the market value of the investment. When investments cannot be sold readily at the desired time or price, the Fund may have to accept a much lower price, may not be able to sell the investment at all or may be forced to forego other investment opportunities, all of which may adversely impact the Fund's returns. Illiquid investments also may be subject to valuation risk. Restricted securities (including Rule 144A securities) may be subject to legal restraints on resale and, therefore, are typically less liquid than other securities. The prices received from selling restricted securities in privately negotiated transactions may be less than those originally paid by a Fund. Investors in restricted securities may not benefit from the same investor protections as publicly traded securities.

Industry Concentration Risk. Because the Fund may invest 25% or more of the value of its assets in an industry or group of industries to the extent that the Underlying Index concentrates in an industry or group of industries, the Fund's performance largely depends on the overall condition of such industry or group of industries and the Fund is susceptible to economic, political and regulatory risks or other occurrences associated with that industry or group of industries. The performance of the Fund if it invests a significant portion of its assets in a particular sector or industry may be closely tied to the performance of companies in a limited number of sectors or industries. Companies in a single sector often share common characteristics, are faced with the same obstacles, issues and regulatory burdens and their securities may react similarly to adverse market conditions. The price movements of investments in a particular sector or industry may be more volatile than the price movements of more broadly diversified investments.

Intellectual Property Risk. The Fund relies on a license that permits the Adviser to use the Intellectual Property in connection with the name and investment strategies of the Fund. Such license may be terminated by the Index Provider, and, as a result, the Fund may lose its ability to use the Intellectual Property. There is also no guarantee that the Index Provider has all rights to license the Intellectual Property. Accordingly, in the event the license is terminated or the Index Provider does not have rights to license the Intellectual Property, it may have a significant effect on the operation of the Fund.

Interest Rate Risk. When interest rates decline, the value of fixed rate securities already held by the Fund can be expected to rise. Conversely, when interest rates rise, the value of existing fixed-rate portfolio securities can be expected to decline. To the extent the Fund invests in fixed-rate debt securities with longer maturities, the Fund is subject to

greater interest rate risk than funds investing solely in shorter-term fixed-rate debt securities. In addition, in a period of rising interest rates, the higher cost of any leverage employed by the Fund and/or increasing defaults by issuers of high-yield securities (or “junk” securities) would likely exacerbate any decline in the Fund’s NAV and the market price of the Fund’s shares. If an issuer of a debt security containing a redemption or call provision exercises either provision in a declining interest rate market, the Fund would likely replace the security with a security having a lower interest rate, which could result in a decreased return for shareholders.

To the extent that changes in market rates of interest are reflected not in a change to a base rate (such as LIBOR) but in a change in the spread over the base rate, which is payable on loans of the type and quality in which the Fund invests, the Fund’s income could be adversely affected. This is because the value of a Senior Loan is partially a function of whether the Senior Loan is paying what the market perceives to be a market rate of interest, given its individual credit and other characteristics. However, unlike changes in market rates of interest for which there is generally only a temporary lag before the portfolio reflects those changes, changes in a Senior Loan’s value based on changes in the market spread on Senior Loans in the Fund’s portfolio may be of longer duration. Please refer to “LIBOR Transition and Associated Risk” for more information.

Duration is a measure used to determine the sensitivity of a security’s price to changes in interest rates that incorporates a security’s yield, coupon, final maturity and call features, among other characteristics. Duration is useful primarily as a measure of the sensitivity of a fixed income security’s market price to interest rate (i.e. yield) movements. All other things remaining equal, for each one percentage point increase in interest rates, the value of a portfolio of fixed income investments would generally be expected to decline by one percent for every year of the portfolio’s average duration above zero. For example, the value of a portfolio of fixed income securities with an average duration of three years would generally be expected to decline by approximately 3% if interest rates rose by one percentage point.

Recent and potential future changes in government monetary policy may affect the level of interest rates. As the Fed “tapers” or reduces the amount of securities it purchases pursuant to its quantitative easing program, and/or raises the federal funds target rate, there is a heightened risk that interest rates will rise, which could expose fixed-income and related markets to heightened volatility and could cause the value of the Fund’s investments, and the Fund’s NAV, to decline, potentially suddenly and significantly, which may negatively impact the Fund’s performance.

Lender Liability Risk. A number of judicial decisions in the United States and elsewhere have upheld the right of Borrowers to sue lending institutions on the basis of various evolving legal theories (collectively termed “lender liability”). Generally, lender liability is founded upon the premise that an institutional Lender has violated a duty (whether implied or contractual) of good faith and fair dealing owed to the Borrower or has assumed a degree of control over the Borrower resulting in a creation of a fiduciary duty owed to the Borrower or its other creditors or shareholders. Because of the nature of certain of the Fund’s investments, the Fund or the Adviser could be subject to allegations of lender liability.

In addition, under common law principles that in some cases form the basis for lender liability claims, if a lending institution (i) intentionally takes an action that results in the under capitalization of a Borrower to the detriment of other creditors of such Borrower, (ii) engages in other inequitable conduct to the detriment of such other creditors, (iii) engages in fraud with respect to, or makes misrepresentations to, such other creditors or (iv) uses its influence as a stockholder to dominate or control a Borrower to the detriment of other creditors of such Borrower, a court may elect to subordinate the claim of the offending lending institution to the claims of the disadvantaged creditor or creditors, a remedy termed “equitable subordination.” As an owner of bank debt in reorganizing companies, the Fund could be subject to claims from creditors of a company that the Fund’s claim should be equitably subordinated, including as a result of actions or omissions by the Fund’s predecessors in interest.

LIBOR Transition and Associated Risk. LIBOR is the average offered rate for various maturities of short-term loans between major international banks who are members of the British Bankers Association. LIBOR has historically been the most common benchmark interest rate index used to make adjustments to variable-rate loans. It is used throughout global banking and financial industries to determine interest rates for a variety of financial instruments (such as debt instruments and derivatives) and borrowing arrangements.

Due to manipulation allegations in 2012 and reduced activity in the financial markets that it measures, in July 2017, the Financial Conduct Authority (the “FCA”), the United Kingdom financial regulatory body, announced a desire to phase out the use of LIBOR by the end of 2021 and that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. The ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publishing certain LIBOR maturities, including some U.S. LIBOR maturities, on December 31, 2021, and is expected to cease publishing the remaining and most liquid U.S. LIBOR maturities on June 30, 2023. It is expected that market participants have transitioned or will transition to the use of alternative

Description of Risks

reference or benchmark rates prior to the applicable LIBOR publication date. Additionally, although regulators have encouraged the development and adoption of alternative rates, such as the Secured Overnight Financing Rate (“SOFR”), the future utilization of LIBOR or of any particular replacement rate remains uncertain.

Although the transition process away from LIBOR has become increasingly well-defined in advance of the anticipated discontinuation dates, the impact on certain debt securities, derivatives and other financial instruments remains uncertain. It is expected that market participants will adopt alternative rates such as SOFR or otherwise amend financial instruments referencing LIBOR to include fallback provisions and other measures that contemplate the discontinuation of LIBOR or other similar market disruption events, but neither the effect of the transition process nor the viability of such measures is known. Further, uncertainty and risk remain regarding the willingness and ability of issuers and lenders to include alternative rates and revised provisions in new and existing contracts or instruments. To facilitate the transition of legacy derivatives contracts referencing LIBOR, the International Swaps and Derivatives Association, Inc. launched a protocol to incorporate fallback provisions. While the transition process away from LIBOR has become increasingly well-defined in advance of the expected LIBOR cessation dates, there are obstacles to converting certain longer term securities and transactions to a new benchmark or benchmarks and the effectiveness of one alternative reference rate versus multiple alternative reference rates in new or existing financial instruments and products has not been determined. Furthermore, the risks associated with the cessation of LIBOR and transition to replacement rates may be exacerbated if an orderly transition to alternative reference rates is not completed in a timely manner. Certain proposed replacement rates to LIBOR, such as SOFR, which is a broad measure of secured overnight US Treasury repo rates, are materially different from LIBOR, and changes in the applicable spread for financial instruments transitioning away from LIBOR will need to be made to accommodate the differences. Furthermore, the risks associated with the expected discontinuation of LIBOR and transition to replacement rates may be exacerbated if an orderly transition to an alternative reference rate is not completed in a timely manner. As market participants transition away from LIBOR, LIBOR’s usefulness may deteriorate and these effects could be experienced until the permanent cessation of the majority of U.S. LIBOR rates in 2023. The transition process may lead to increased volatility and illiquidity in markets that currently rely on LIBOR to determine interest rates. LIBOR’s deterioration may adversely affect the liquidity and/or market value of securities that use LIBOR as a benchmark interest rate.

Alteration of the terms of a debt instrument or a modification of the terms of other types of contracts to replace LIBOR or another interbank offered rate (“IBOR”) with a new reference rate could result in a taxable exchange and the realization of income and gain/loss for U.S. federal income tax purposes. The Internal Revenue Service (“IRS”) has issued final regulations regarding the tax consequences of the transition from IBOR to a new reference rate in debt instruments and non-debt contracts. Under the final regulations, alteration or modification of the terms of a debt instrument to replace an operative rate that uses a discontinued IBOR with a qualified rate (as defined in the final regulations) including true up payments equalizing the fair market value of contracts before and after such IBOR transition, to add a qualified rate as a fallback rate to a contract whose operative rate uses a discontinued IBOR or to replace a fallback rate that uses a discontinued IBOR with a qualified rate would not be taxable. The IRS may provide additional guidance, with potential retroactive effect.

Limited Information Risk. The types of Senior Loans in which the Fund will invest may not have been rated by a NRSRO, have not been registered with the SEC or any state securities commission, and have not been listed on any national securities exchange. Although the Fund will generally have access to financial and other information made available to the Lenders in connection with Senior Loans, the amount of public information available with respect to Senior Loans will generally be less extensive than that available for rated, registered or exchange-listed securities. As a result, the performance of the Fund and its ability to meet its investment objective is more dependent on the analytical ability of the Adviser than would be the case for an investment company that invests primarily in rated, registered or exchange-listed securities.

Liquidity Risk. Liquidity risk is the risk that low trading volume, lack of a market maker, large position size, or legal restrictions (including daily price fluctuation limits or “circuit breakers”) limits or prevents the Fund from selling particular securities or unwinding derivative positions at desirable prices. The Fund is also exposed to liquidity risk when it has an obligation to purchase particular securities (e.g., as a result of entering into reverse repurchase agreements, writing a put, or closing a short position). When there is no willing buyer or investments cannot be readily sold or closed out, the Fund may have to sell at a lower price than the price at which the Fund is carrying the investments or may not be able to sell the investments at all, each of which would have a negative effect on the Fund’s performance. Although most of the Fund’s investments must be liquid at the time of investment, investments may become illiquid after purchase by the Fund, particularly during periods of market turmoil.

Because loan transactions often take longer to settle than transactions in other securities, the Fund may not receive the proceeds from the sale of a loan for a significant period of time. As a result, the Fund may maintain higher levels of cash and short-term investments than mutual funds that invest in securities with shorter settlement cycles, may enter into a line of credit to permit the Fund to finance redemptions pending settlement of the sale of portfolio securities, or may be required to sell portfolio securities when it would not otherwise choose to do so, each of which may adversely affect the Fund's performance. No assurance can be given that these measures will provide the Fund with sufficient liquidity to pay redemption proceeds in a timely manner in the event of abnormally large redemptions.

Loan Participation Risk. In addition to the risks typically associated with debt securities, Participations involve the risk that there may not be a readily available market for Participation interests and, in some cases, the Fund may have to dispose of such securities at a substantial discount from face value. Participations also involve the credit risk associated with the underlying corporate borrower. Participations also carry the risk of insolvency of the lending bank or other intermediary.

Management Risk. The Fund does not fully replicate its Underlying Index and may hold securities not included in its Underlying Index. As a result, the Fund is subject to management risk because it relies on the Adviser's ability to achieve its investment objective. The Fund runs the risk that the Adviser's investment techniques will fail to produce desired results and cause the Fund to incur significant losses. The Adviser also may fail to use derivatives effectively, choosing to hedge or not to hedge positions at disadvantageous times. In addition, if one or more key individuals leave, the Adviser may not be able to hire qualified replacements or may require an extended time to do so. This situation could prevent the Fund from achieving its investment objectives. The Fund's portfolio manager uses qualitative analyses and/or models. Any imperfections or limitations in such analyses and models could affect the ability of the portfolio manager to implement strategies. By necessity, these analyses and models make simplifying assumptions that limit their efficacy. Models that appear to explain prior market data can fail to predict future market events. Further, the data used in models may be inaccurate and/or it may not include the most recent information about a company or a security.

Market Price Variance Risk. The Fund's Shares are listed for trading on NASDAQ and are bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in the NAV and supply and demand for Shares. As a result, the trading prices of Shares may deviate significantly from NAV during periods of market

volatility. Differences between secondary market prices and the NAV of the Fund may be due largely to supply and demand forces in the secondary market, which may not be the same forces as those influencing prices for securities held by the Fund at a particular time. The Adviser cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Adviser believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. In addition, there may be times when the market price of the Fund and the Fund's NAV vary significantly and you may pay more than the Fund's NAV when buying Shares on the secondary market, and you may receive less than the Fund's NAV when you sell those Shares. While the creation/redemption feature is designed to make it likely that Shares normally will trade close to the Fund's NAV, disruptions to creations and redemptions may result in trading prices that differ significantly from the Fund's NAV. The market price of Shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialist, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to the Fund's NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares.

Non-Diversification Risk. Due to the nature of the Fund's investment strategy and its non-diversified status (for purposes of the 1940 Act), the Fund may invest a greater percentage of its assets in the securities of fewer issuers than a "diversified" fund, and accordingly may be more vulnerable to changes in the value of those issuers' securities. Since the Fund invests in the securities of a limited number of issuers, it is particularly exposed to adverse developments affecting those issuers, and a decline in the market value of a particular security held by the Fund is likely to affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers.

Non-Payment Risk. Debt securities are subject to the risk of non-payment of scheduled interest and/or principal. Non-payment would result in a reduction of income to the Fund, a reduction in the value of the security experiencing non-payment and a potential decrease in the NAV of the Fund. There can be no assurance that the liquidation of any collateral would satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal payments, or that such collateral could be readily liquidated. Moreover, as a practical matter, most borrowers cannot satisfy their debts by selling their assets. Borrowers pay their debts from the cash flow they generate. This is particularly the case for borrowers that are highly leveraged. If the borrower's cash

Description of Risks

flow is insufficient to pay its debts as they come due, the borrower is far more likely to seek to restructure its debts than it is to sell off assets to pay its senior loans. Borrowers may try to restructure their debts either by seeking protection from creditors under Chapter 11 of the U.S. Bankruptcy Code (the “Bankruptcy Code”) or negotiating a work-out. In the event of bankruptcy of a borrower, the Fund could experience delays or limitations with respect to its ability to realize the benefits of the collateral securing a debt security. The agent generally is responsible for determining that the lenders have obtained a perfected security interest in the collateral securing the debt security. If a borrower files for protection from creditors under Chapter 11 of the Bankruptcy Code, the Bankruptcy Code will impose an automatic stay that prohibits the agent from liquidating collateral. The agent may ask the bankruptcy court to lift the stay. As a practical matter, the court is unlikely to lift the stay if it concludes that the borrower has a chance to emerge from the reorganization proceedings and the collateral is likely to hold most of its value. If the Lenders have a perfected security interest, the debt security will be treated as a separate class in the reorganization proceedings and will retain a priority interest in the collateral. Chapter 11 reorganization plans typically are the product of negotiation among the borrower and the various creditor classes. Successful negotiations may require the lenders to extend the time for repayment, change the interest rate or accept some consideration in the form of junior debt or equity securities. A work-out outside of bankruptcy may produce similar concessions by senior lenders.

Ongoing Monitoring Risk. On behalf of the several Lenders, the Agent generally will be required to administer and manage the Senior Loans and, with respect to collateralized Senior Loans, to service or monitor the collateral. In this connection, the valuation of assets pledged as collateral will reflect market value and the Agent may rely on independent appraisals as to the value of specific collateral. The Agent, however, may not obtain an independent appraisal as to the value of assets pledged as collateral in all cases. The Fund normally will rely primarily on the Agent (where the Fund or owns an Assignment) or the selling Lender (where the Fund owns a Participation) to collect principal of and interest on a Senior Loan. Furthermore, the Fund usually will rely on the Agent (where the Fund or owns an Assignment) or the selling Lender (where the Fund owns a Participation) to monitor compliance by the Borrower with the restrictive covenants in the Loan Agreement and notify the Fund of any adverse change in the Borrower’s financial condition or any declaration of insolvency. Collateralized Senior Loans will frequently be secured by all assets of the Borrower that qualify as collateral, which may include common stock of the Borrower or its subsidiaries. Additionally, the terms of the Loan Agreement may require the Borrower to pledge

additional collateral to secure the Senior Loan, and enable the Agent, upon proper authorization of the Lenders, to take possession of and liquidate the collateral and to distribute the liquidation proceeds pro rata among the Lenders. If the terms of a Senior Loan do not require the Borrower to pledge additional collateral in the event of a decline in the value of the original collateral, the Fund will be exposed to the risk that the value of the collateral will not at all times equal or exceed the amount of the Borrower’s obligations under the Senior Loan. Lenders that have sold Participation interests in such Senior Loan will distribute liquidation proceeds received by the Lenders pro rata among the holders of such Participations. Unless, under the terms of the loan, the Fund has direct recourse against the Borrower, the Fund may have to rely on the Agent or other financial intermediary to apply appropriate credit remedies against a Borrower. The Adviser will also monitor these aspects of the Fund’s investments.

Operational and Technology Risk. The Fund, its service providers, and other market participants increasingly depend on complex information technology and communications systems to conduct business functions. These systems are subject to a number of different threats or risks that could adversely affect the Fund and its shareholders, despite the efforts of the Adviser, the Fund and its service providers to adopt technologies, processes, and practices intended to mitigate these risks.

For example, unauthorized third parties may attempt to improperly access, modify, disrupt the operations of, or prevent access to these systems of the Fund, the Fund’s service providers, counterparties, or other market participants or data within them (a “cyber-attack”). Power or communications outages, acts of god, information technology equipment malfunctions, operational errors, and inaccuracies within software or data processing systems may also disrupt business operations or impact critical data. Market events also may trigger a volume of transactions that overloads current information technology and communication systems and processes, impacting the ability to conduct the Fund’s operations.

Cyber-attacks, disruptions, or failures that affect the Fund’s service providers or counterparties may adversely affect the Fund and its shareholders, including by causing losses for the Fund or impairing the Fund’s operations. For example, the Fund or its service providers’ assets or sensitive or confidential information may be misappropriated, data may be corrupted, and operations may be disrupted (e.g., cyber-attacks or operational failures may cause the release of private shareholder information or confidential Fund information, interfere with the processing of shareholder transactions, impact the ability to calculate the Fund’s NAV, and impede trading). In addition, cyber-attacks, disruptions, or failures may cause reputational damage and subject the

Fund or its service providers to regulatory fines, litigation costs, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. While the Fund and its service providers may establish business continuity and other plans and processes to address the possibility of cyber-attacks, disruptions, or failures, there are inherent limitations in such plans and systems, including that they do not apply to third parties, such as other market participants, as well as the possibility that certain risks have not been identified or that unknown threats may emerge in the future.

Similar types of operational and technology risks are also present for issuers of the Fund's investments, which could have material adverse consequences for such issuers, and may cause the Fund's investments to lose value. In addition, cyber-attacks involving the Fund counterparty could affect such counterparty's ability to meet its obligations to the Fund, which may result in losses to the Fund and its shareholders. Furthermore, as a result of cyber-attacks, disruptions, or failures, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in the Fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments. The Fund cannot directly control any cybersecurity plans and systems put in place by its service providers, counterparties, issuers in which the Fund invests, or securities markets and exchanges.

Options Risk. The use of options is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives. A transaction in options or securities may be unsuccessful to some degree because of market behavior or unexpected events.

When the Fund writes a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but retains the risk of loss should the price of the underlying security decline. The writer of an option has no control over the time when it may be required to fulfill its obligation and once an option writer has received an exercise notice, it must deliver the underlying security at the exercise price.

When the Fund writes a covered put option, the Fund bears the risk of loss if the value of the underlying stock declines below the exercise price minus the put premium. If the option is exercised, the Fund could incur a loss if it is required

to purchase the stock underlying the put option at a price greater than the market price of the stock at the time of exercise plus the put premium the Fund received when it wrote the option. Special tax rules apply to a Fund's, or an underlying fund's, transactions in options, which could increase the amount of taxes payable by shareholders. While the Fund's potential gain in writing a covered put option is limited to distributions earned on the liquid assets securing the put option plus the premium received from the purchaser of the put option, the Fund risks a loss equal to the entire exercise price of the option minus the put premium. An option that was fully covered at the time it was entered may be unwound and no longer covered in reaction to market price movements if the Adviser believes such action is in the best interests of the Fund.

Pandemics and Associated Economic Disruption. An outbreak of respiratory disease caused by a novel coronavirus was first detected in China in late 2019 and subsequently spread globally ("COVID-19"). This coronavirus has resulted in and may continue to result in the closing of borders, enhanced health screenings, disruptions to healthcare service preparation and delivery, quarantines, cancellations, disruptions to supply chains and customer activity, as well as general anxiety and economic uncertainty. The impact of this coronavirus may be short term or may last for an extended period of time and has resulted and may continue to result in a substantial economic downturn. Health crises caused by outbreaks of disease, such as the coronavirus, may exacerbate other pre-existing political, social and economic risks. The impact of this outbreak, and other epidemics and pandemics that may arise in the future, could continue to negatively affect the global economy, as well as the economies of individual countries, individual companies and the market in general in significant and unforeseen ways. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, and impact the Fund's ability to complete repurchase requests. Any such impact could adversely affect the Fund's performance, the performance of the securities in which the Fund invests, lines of credit available to the Fund and may lead to losses on your investment in the Fund. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

The United States responded to the coronavirus pandemic and resulting economic distress with fiscal and monetary stimulus packages, including the Coronavirus Aid, Relief, and Economic Security Act (the "CARES Act") passed in late March 2020. The CARES Act provides for over \$2.2 trillion in resources to small businesses, state and local governments,

Description of Risks

and individuals adversely impacted by the COVID-19 pandemic. In late December 2020, the government also passed a spending bill that included \$900 billion in stimulus relief for the COVID-19 pandemic. Further, in March 2021, the government passed the American Rescue Plan Act of 2021, a \$1.9 trillion stimulus bill to accelerate the United States' recovery from the economic and health effects of the COVID-19 pandemic. In addition, in mid-March 2020, the Fed cut interest rates to historically low levels and announced a new round of quantitative easing, including purchases of corporate and municipal government bonds. The Fed also enacted various programs to support liquidity operations and funding in the financial markets, including expanding its reverse repurchase agreement operations, which added \$1.5 trillion of liquidity to the banking system; establishing swap lines with other major central banks to provide dollar funding; establishing a program to support money market funds; easing various bank capital buffers; providing funding backstops for businesses to provide bridging loans for up to four years; and providing funding to help credit flow in asset-backed securities markets. In addition, the Fed extended credit to small- and medium sized businesses. As the Fed "tapers" or reduces the amount of securities it purchases pursuant to quantitative easing, and/or if the Fed raises the federal funds rate, there is a heightened risk that interest rates will rise, which could expose fixed-income and related markets to heightened volatility and could cause the value of the Fund's investments, and the Fund's NAV, to decline, potentially suddenly and significantly. As a result, the Fund may experience high redemptions and, as a result, increased portfolio turnover, which could increase the costs that the Fund incurs and may negatively impact the Fund's performance. There is no assurance that the U.S. government's support in response to COVID-19 economic distress will offset the adverse impact to securities in which the Fund may invest and future governmental support is not guaranteed.

Passive Investment Risk. The Fund is not actively managed and may be affected by a general decline in loan market segments included in the applicable Underlying Index. The Fund invests in securities included in, or representative of, the Underlying Index regardless of their investment merits. The Adviser does not attempt to take defensive positions under any market conditions, including during declining markets.

Portfolio Turnover Risk. A high rate of portfolio turnover (i.e., 100% or more) will result in increased transaction costs for the Fund in the form of increased dealer spreads and brokerage commissions. Greater transaction costs may reduce Fund performance. High portfolio turnover also may result in increased realization of net short-term capital gains (which are taxable to shareholders as ordinary income when

distributed to them), higher taxable distributions and lower the Fund's after-tax performance.

Prepayment Risk. Borrowers may pay back principal before the scheduled due date. Such prepayments may require the Fund to replace a debt security with a lower-yielding security. During periods of falling interest rates, issuers of debt securities may repay higher rate securities before their maturity dates. This may cause the Fund to lose potential price appreciation and to be forced to reinvest the unanticipated proceeds at lower interest rates. This may adversely affect the NAV of the Fund's shares.

Regulatory Risk. Legal, tax and regulatory changes could occur and may adversely affect the Fund and its ability to pursue its investment strategies and/or increase the costs of implementing such strategies. New (or revised) laws or regulations may be imposed by the CFTC, the SEC, the IRS, the Fed or other banking regulators, other governmental regulatory authorities or self-regulatory organizations that supervise the financial markets that could adversely affect the Fund. In particular, these agencies are empowered to promulgate a variety of new rules pursuant to financial reform legislation in the United States. The Fund also may be adversely affected by changes in the enforcement or interpretation of existing statutes and rules by these governmental regulatory authorities or self-regulatory organizations.

To the extent that legislation or state or federal regulators impose additional requirements or restrictions with respect to the ability of financial institutions to make loans in connection with highly leveraged transactions, the availability of Senior Loan interests for investment by a Fund may be adversely affected. To the extent that legislation or state or federal regulators impose additional requirements or restrictions with respect to the ability of a Fund to invest in the assets of distressed companies, the availability of distressed company interests for investment by a Fund may be adversely affected. In addition, such requirements or restrictions may reduce or eliminate sources of financing for affected Borrowers. Further, to the extent that legislation or federal or state regulators require such institutions to dispose of Senior Loan interests relating to highly leveraged transactions or subject such Senior Loan interests to increased regulatory scrutiny, such financial institutions may determine to sell Senior Loan interests in a manner that results in a price that, in the opinion of the Adviser, is not indicative of fair value. Were the Fund to attempt to sell a Senior Loan interest at a time when a financial institution was engaging in such a sale with respect to the Senior Loan interest, the price at which the Fund could consummate such a sale might be adversely affected. See "Industry Concentration Risk" above.

Securities Market Risk. Securities market risk is the risk that the value of securities owned by the Fund may go up or down, sometimes rapidly or unpredictably, due to factors affecting particular companies or the securities markets generally. The profitability of the Fund substantially depends upon the Adviser correctly assessing the future price movements of stocks, bonds, loans, options on stocks, and other securities and the movements of interest rates. The Adviser cannot guarantee that it will be successful in accurately predicting price movements.

The market prices of equities may decline for reasons that directly relate to the issuing company (such as poor management performance or reduced demand for its goods or services), factors that affect a particular industry (such as a decline in demand, labor or raw material shortages, or increased production costs) or general market conditions not specifically related to a company or industry (such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally). See also “Debt Securities Risk” and “Fixed Income Market Risk” above.

As a result of the nature of the Fund’s investment activities, it is possible that the Fund’s financial performance may fluctuate substantially from period to period. Additionally, at any point in time an investment in the Fund may be worth less than the original investment, even after taking into account the reinvestment of dividends and distributions.

In addition, there is a risk that the prices of goods and services in the United States and many foreign economies may decline over time, known as deflation. Deflation may have an adverse effect on stock prices and creditworthiness and may make defaults on debt more likely. If a country’s economy slips into a deflationary pattern, it could last for a prolonged period and may be difficult to reverse. Further, there is a risk that the present value of assets or income from investments will be less in the future, known as inflation. Inflation rates may change frequently and drastically as a result of various factors, including unexpected shifts in the domestic or global economy, and a fund’s investments may be affected, which may reduce a fund’s performance. Further, inflation may lead to the rise in interest rates, which may negatively affect the value of debt instruments held by the fund, resulting in a negative impact on a fund’s performance. Generally, securities issued in emerging markets are subject to a greater risk of inflationary or deflationary forces, and more developed markets are better able to use monetary policy to normalize markets.

Senior Loans Risk. Senior loans may not be rated by a rating agency, registered with the SEC or any state securities commission or listed on any national securities exchange.

Therefore, there may be less publicly available information about them than for registered or exchange-listed securities. The risks associated with Senior Loans are similar to the risks of below investment grade securities in that they are considered speculative. The Fund’s investments in Senior Loans are typically below investment grade and are considered speculative because of the credit risk of their issuers. Also, because portfolio management relies mainly on its own evaluation of the creditworthiness of borrowers, the Fund may be particularly dependent on portfolio management’s analytical abilities. Moreover, any specific collateral used to secure a loan may decline in value or lose all its value or become illiquid, which would adversely affect the loan’s value. Economic and other events, whether real or perceived, can reduce the demand for certain Senior Loans or Senior Loans generally, which may reduce market prices and cause the Fund’s NAV per share to fall. The frequency and magnitude of such changes cannot be predicted. The secondary market in which these investments are traded is generally less liquid than the market for higher-grade debt. Less liquidity in the secondary trading market could adversely affect the price at which the Fund could sell a high yield Senior Loan, and could adversely affect the market price and NAV of the Fund’s shares. At times of less liquidity, it may be more difficult to value high yield Senior Loans because this valuation may require more research, and elements of judgment may play a greater role in the valuation since there is less reliable, objective data available. Investments in Senior Loans and other securities may result in greater NAV and market price fluctuation of the Fund’s shares than if the Fund did not make such investments. See “Taxation” below and “Income Tax Considerations” in the SAI for a discussion of special tax consequences associated with any investment by the Fund in below investment grade securities.

As with any debt security, Senior Loans are generally subject to the risk of price declines due to increases in interest rates, particularly long-term rates. Senior loans are also subject to the risk that, as interest rates rise, the cost of borrowing increases, which may increase the risk of default. In addition, the interest rates of floating rate loans typically only adjust to changes in short-term interest rates; long-term interest rates can vary dramatically from short-term interest rates. Therefore, Senior Loans may not mitigate price declines in a rising long-term interest rate environment. Declines in interest rates may increase prepayments of debt obligations and require the Fund to invest assets at lower yields. No active trading market may exist for certain Senior Loans, which may impair the ability of the Fund to realize full value in the event of the need to liquidate such assets. Adverse market conditions may impair the liquidity of some actively traded Senior Loans. Although Senior Loans in which the Fund may invest will often be secured by collateral, there can be no assurance that liquidation of such collateral would satisfy

Description of Risks

the Borrower's obligation in the event of a default or that such collateral could be readily liquidated. In the event of bankruptcy of a Borrower, the Fund could experience delays or limitations in its ability to realize the benefits of any collateral securing a Senior Loan. The Fund may also invest in Senior Loans that are not secured. In addition to the risks typically associated with debt securities and loans generally, Senior Loans are also subject to the risk that a court could subordinate a Senior Loan, which typically holds a senior position in the capital structure of a borrower, to presently existing or future indebtedness or take other action detrimental to the holders of Senior Loans.

LIBOR is the average offered rate for various maturities of short-term loans between major international banks who are members of the British Bankers Association. LIBOR has historically been the most common benchmark interest rate index used to make adjustments to variable-rate loans; however, due to manipulation allegations in 2012 and reduced activity in the financial markets that it measures, in July 2017, the FCA, the United Kingdom financial regulatory body, announced that it will stop encouraging banks to provide the quotations needed to sustain LIBOR. Please refer to "LIBOR Transition and Associated Risk" for more information.

Stop Order Risk. During periods of high market volatility, a Fund share may trade at a significant discount to its NAV, and in these circumstances certain types of brokerage orders may expose an investor to an increased risk of loss. A "stop order," sometimes called a "stop-loss order," may cause a Fund share to be sold at the next prevailing market price once the "stop" level is reached, which during a period of high volatility can be at a price that is substantially below NAV. By including a "limit" criteria with a brokerage order, a shareholder may be able to limit the size of the loss resulting from the execution of an ill-timed stop order, although no assurance can be given that inclusion of limit criteria will benefit the shareholder.

Swaps Risk. The use of swaps is a highly specialized activity which involves investment techniques, risk analyses and tax planning different from those associated with ordinary portfolio securities transactions. These transactions can result in sizeable realized and unrealized capital gains and losses relative to the gains and losses from the Fund's direct investments in securities.

Transactions in swaps can involve greater risks than if the Fund had invested in the reference assets directly since, in addition to general market risks, swaps may be leveraged and are also subject to illiquidity risk, counterparty risk, credit risk and pricing risk. However, certain risks may be reduced (but not eliminated) if the Fund invests in cleared swaps. Regulators also may impose limits on an entity's or group of entities' positions in certain swaps. Because bilateral swap

agreements are two-party contracts and because they may have terms of greater than seven days, these swaps may be considered to be illiquid. Moreover, the Fund bears the risk of loss of the amount expected to be received under a swap in the event of the default or bankruptcy of a swap counterparty. Many swaps are complex and valued subjectively. Swaps and other derivatives may also be subject to pricing or "basis" risk, which exists when the price of a particular derivative diverges from the price of corresponding cash market instruments. Under certain market conditions it may not be economically feasible to initiate a transaction or liquidate a position in time to avoid a loss or take advantage of an opportunity. If a swap transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses.

The value of swaps can be very volatile, and a variance in the degree of volatility or in the direction of securities prices from the Adviser's expectations may produce significant losses in the Fund's investments in swaps. In addition, a perfect correlation between a swap and a reference asset may be impossible to achieve. As a result, the Adviser's use of swaps may not be effective in fulfilling the Adviser's investment strategies and may contribute to losses that would not have been incurred otherwise.

Certain separately managed accounts ("SMAs") that are designed to track the performance of an index may serve as the underlying reference asset for total return swaps used by the Fund ("SMA Total Return Swaps"). This investment technique provides the Fund with synthetic long investment exposure to the performance of the index the SMAs seek to track, and thus, any underlying SMAs, through payments made by a swap counterparty to the Fund that reflect the positive total return, net of fees of the SMA, which may be netted against the payment of transaction fees. In exchange, the Fund makes periodic payments to the counterparty under the swap based on certain upfront and/or monthly transaction fees as well as payments reflecting any negative total return on the SMA. The swap generally provides the Fund with the economic equivalent of ownership of the portfolio of the SMA through an entitlement to receive any gains realized by the SMA and an obligation to pay any losses realized by the SMA, which may be netted against the financing expenses of the swap. This investment technique is intended to provide the Fund with exposure to the performance of the SMA and, indirectly, the performance of the index the SMA is designed to track.

The performance of an SMA Total Return Swap is subject to the performance and the risks of the index the SMA seeks to track, and ultimately, of the underlying SMA and its investment portfolio. If the performance of the SMA

underlying the SMA Total Return Swap is negative or is not sufficiently positive to offset the periodic payment due to the counterparty, then the performance of the Fund will be negatively impacted. Additionally, the performance of the underlying SMA may deviate from the performance of the index it is designed to track. To the extent that the SMA's performance deviates from that of the relevant index, the performance of the SMA Total Return Swap, and in turn, the performance of the Fund, will deviate from the performance of the relevant index as well. The expenses paid by the underlying SMA holder (including fees paid on the basis of the performance of the underlying account manager) reduce the performance returns of the SMA's investments and those expenses are embedded in the performance returns of the SMA Total Return Swap, as the returns of the SMA Total Return Swap are based on the net returns of the SMA. The Fund's use of SMA Total Return Swaps may also subject the Fund to the risks of leverage, to the extent utilized by the SMAs.

Telecommunications Sector Risk. The Fund may be impacted by risks faced by companies in the telecommunications services industry, including: a telecommunications market characterized by increasing competition and regulation by the Federal Communications Commission and various state regulatory authorities; the need to commit substantial capital to meet increasing competition, particularly in formulating new products and new services using new technology; and technological innovations that may make various products and services obsolete.

Tracking Error Risk. Imperfect correlation between the Fund's portfolio securities and those in the applicable Underlying Index, rounding of prices, changes to the Underlying Index and regulatory requirements may cause tracking error, which is the divergence of the Fund's performance from that of the Underlying Index. This risk may be heightened during times of increased market volatility or other unusual market conditions. This risk also may be increased during periods of high volumes of purchases and/or redemptions. Tracking error also may result because the Fund incurs fees and expenses, while the Underlying Index does not. For example, the Fund incurs a number of operating expenses not applicable to the Underlying Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Underlying Index and raising cash to meet redemptions or deploying cash in connection with newly created Creation Units. Because the Fund bears the costs and risks associated with buying and selling securities while such costs are not factored into the return of the Underlying Index, the Fund's return may deviate significantly from the return of the Underlying Index. Because the Fund employs a representative sampling strategy, the

Fund may experience tracking error to a greater extent than a fund that seeks to replicate an index. The Adviser may not be able to cause the Fund's performance to correlate to that of the Underlying Index, either on a daily or aggregate basis. Because the Underlying Index rebalances monthly but the Fund is not obligated to do the same, the risk of tracking error may increase following the rebalancing of the Underlying Index.

Management of the Fund

Board of Trustees and Investment Adviser

The Board of Trustees (the "Board" or "Trustees") has overall management responsibility for each series of NexPoint Funds I and NexPoint Funds II, Highland Global Allocation Fund and Highland Income Fund. See "Management of the Trust" in the SAI for the names of and other information about the Trustees and officers of the Fund. Additionally, the Trustees of the Board also have overall management responsibility as trustees for funds advised by NexPoint Advisors, L.P., including NexPoint Capital, Inc. (a closed-end management investment company that has elected to be treated as a business development company under the 1940 Act); and NexPoint Real Estate Strategies Fund, a closed-end fund that operates as an interval fund. NexPoint Advisors, L.P. is an affiliate of NexPoint Asset Management, L.P.

NexPoint Asset Management, L.P. ("NexPoint" or the "Adviser") serves as the investment adviser to the Fund. The address of the Adviser is 300 Crescent Court, Suite 700, Dallas, Texas 75201. The Fund has entered into an investment advisory agreement with NexPoint (the "Investment Advisory Agreement") pursuant to which NexPoint provides the day-to-day management of the Fund's portfolio of securities, which includes buying and selling securities for the Fund and conducting investment research. Additionally, NexPoint furnishes offices, necessary facilities, equipment and personnel. Organized in February 2009, NexPoint is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. As of June 30, 2022, NexPoint had approximately \$2.6 billion in assets under management.

NexPoint has entered into a Services Agreement (the "Services Agreement") with Skyview Group ("Skyview"), effective February 25, 2021, pursuant to which NexPoint will receive administrative and operational support services to enable it to provide the required advisory services to the Fund. The Adviser, and not the Fund, will compensate all Adviser and Skyview personnel who provide services to the Fund.

In return for its advisory services, the Fund pays the Adviser an advisory fee of 0.45% of the Fund's Average Daily Managed Assets for the most recent fiscal year. The Adviser

Management of the Fund

has contractually agreed to limit the total annual operating expenses (exclusive of taxes, brokerage commissions and other transaction costs, acquired fund fees and expenses, extraordinary expenses and dividend expense on short sales (collectively, the “Excluded Expenses”)) of the Fund to 0.55% of average daily net assets of the Fund (the “Expense Cap”). The Expense Cap will continue through at least October 31, 2023, and may not be terminated prior to this date without the action or consent of the Board. Under the Expense Cap, the Adviser may recoup waived and/or reimbursed amounts with respect to the Fund within thirty-six months of the date such amounts were waived or reimbursed, provided the Fund’s total annual operating expenses, including such recoupment, do not exceed the Expense Cap in effect at the time of such waiver/reimbursement.

“Average Daily Managed Assets” of the Fund shall mean the average daily value of the total assets of the Fund, less all accrued liabilities of the Fund (other than the aggregate amount of any outstanding borrowings constituting financial leverage). The Fund pays its own ordinary operating and activity expenses, such as legal and auditing fees, investment advisory fees, administrative fees, custodial fees, transfer agency fees, the cost of communicating with shareholders and registration fees, as well as other operating expenses such as interest, taxes, brokerage, insurance, bonding, compensation of Independent Trustees of the Fund and extraordinary expenses. A discussion regarding the Board’s approval of the Investment Advisory Agreement for the Fund is available in the Trust’s semiannual report to shareholders for the period ended December 31, 2021. The Investment Advisory Agreement may be terminated by the Fund or by vote of a majority of the outstanding voting securities of the Fund, without the payment of any penalty, on not more than 60 days’ nor less than 30 days written notice. In addition, the Investment Advisory Agreement automatically terminates in the event of its “assignment” (as defined in the 1940 Act).

The Fund is a party to contractual arrangements with various parties, including, among others, the Fund’s investment adviser, administrator, distributor, and shareholder servicing agent, who provide services to the Fund. Shareholders are not parties to, or intended (“third-party”) beneficiaries of, any such contractual arrangements, and such contractual arrangements are not intended to create in any individual shareholder or group of shareholders any right to enforce them against the service providers or to seek any remedy under them against the service providers, either directly or on behalf of the Fund.

Neither this Prospectus, nor the related SAI, is intended, or should be read, to be or to give rise to an agreement or contract between the Trust or the Fund and any investor, or to give rise to any rights in any shareholder or other person

other than any rights under federal or state law that may not be waived.

Multi-Manager Structure

On October 26, 2010, the SEC issued a multi-managers’ exemptive order (the “Order”) from certain provisions of the 1940 Act, pursuant to which the Adviser will, subject to the oversight of the Fund’s Board, be permitted to enter into and materially amend sub-advisory agreements on behalf of the Fund with sub-advisers unaffiliated with the Adviser without such agreements being approved by the shareholders of the Fund. The Fund’s Board and the Adviser will therefore have the right to hire, terminate or replace sub-advisers without first obtaining shareholder approval, including in the event that a sub-advisory agreement has automatically terminated as a result of an assignment. The Adviser will continue to have the ultimate responsibility to oversee each sub-adviser and recommend its hiring, termination and replacement. The Fund has obtained approval of its reliance on the Order from the Board and from the initial shareholder of the Fund. The Trust and the Adviser will be subject to certain conditions imposed by the Order, including the condition that within 90 days of hiring of a new non-affiliated sub-adviser, the Fund will provide shareholders with an information statement containing information about the sub-adviser. Shareholders of the Fund retain the right to terminate a sub-advisory agreement for the Fund at any time by a vote of the majority of the outstanding securities of the Fund. Operation of the Fund under the Multi-Manager Structure will not: (1) permit management fees paid by the Fund to NexPoint to be increased without shareholder approval; or (2) diminish NexPoint’s responsibilities to the Fund, including NexPoint’s overall responsibility for overseeing the portfolio management services furnished by its sub-advisers.

Shareholders will be notified of any changes made to sub-advisers or sub-advisory agreements within 90 days of the change.

Portfolio Manager

The portfolio manager for the Fund is Matt Pearson. Mr. Pearson has managed the Fund since January 2021.

Mr. Pearson is a Portfolio Manager and Equity Trader at NexPoint Asset Management, L.P. Previously, he was an Assistant Trader and Senior Operations Analyst with Highland Capital Management, L.P. Prior to joining NexPoint in June 2012, he was a Junior Associate for Chapwood Investments. Mr. Pearson received a BS in Economics with Financial Applications from Southern Methodist University. Mr. Pearson is a holder of the right to use the Chartered Financial Analyst designation.

The SAI provides additional information about the portfolio manager's compensation, other accounts managed by the portfolio manager and the portfolio manager's ownership of securities issued by the Fund.

Distributor of the Fund

The Fund's shares are offered for sale through SEI Investments Distribution Co. (the "Distributor"), One Freedom Valley Drive, Oaks, PA 19456. The Distributor does not maintain a secondary market in shares of the Fund. The Distributor has no role in determining the policies of the Fund or the securities that are purchased or sold by the Fund.

Distribution (12b-1) Plan

Under a Rule 12b-1 Distribution Plan (the "Plan") adopted by the Board, the Fund may pay the Distributor and financial intermediaries, such as broker-dealers and investment advisors, up to 0.25% on an annualized basis of the average daily net assets of the Fund as reimbursement or compensation for distribution related activities and other services with respect to the Fund. Because these fees are paid out of the Fund's assets on an on-going basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges. As of the date of this Prospectus, no payments have been made by the Fund under the Plan.

Disclosure of Portfolio Holdings

The Fund has adopted policies and procedures to protect the Fund's portfolio information and to prevent the misuse of that information by a third party. A description of the Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available (i) in the SAI and (ii) on the Fund's website at <http://www.nexpointassetmgmt.com>.

How to Buy and Sell Shares

The Trust issues and redeems shares of the Fund only in aggregations of Creation Units. A Creation Unit is comprised of 100,000 shares. The value of such Creation Unit was \$2,000,000 at the Fund's inception.

See the section of this Prospectus entitled "Creation and Redemption of Shares" for more information.

Shares of the Fund will be listed on the Exchange for trading on any day that the Exchange is open for business. Shares can be bought and sold throughout the trading day like shares of other publicly-traded companies. The Trust does not impose any minimum investment for shares of the Fund purchased on an exchange. Buying or selling Fund shares on an exchange involves two types of costs that may apply to all securities transactions. When buying or selling shares of the Fund through a broker, you will likely incur a brokerage

commission or other charges determined by your broker. In addition, you may incur the cost of the "spread" — that is, any difference between the bid price and the ask price. The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of shares. The spread varies over time for shares of the Fund based on its trading volume and market liquidity, and is generally lower if the Fund has a lot of trading volume and market liquidity and higher if the Fund has little trading volume and market liquidity. Shares of the Fund will trade on NASDAQ under the trading symbol "SNLN".

The Board has adopted a policy of not monitoring for frequent purchases and redemptions of Fund shares ("frequent trading") that appear to attempt to take advantage of a potential arbitrage opportunity presented by a lag between a change in the value of the Fund's portfolio securities after the close of the primary markets for the Fund's portfolio securities and the reflection of that change in the Fund's NAV ("market timing"), because the Fund's shares are listed for trading on a national securities exchange. Because secondary market trades do not involve the Fund directly, it is unlikely those trades would cause many of the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund's trading costs and the realization of capital gains.

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies. Registered investment companies are permitted to invest in the Fund beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions set forth in SEC rules or in an SEC exemptive order issued to the Trust. In order for a registered investment company to invest in shares of the Fund pursuant to the exemptive relief obtained by the Trust from the limitations of Section 12(d)(1), the company must enter into an agreement with the Trust.

Book Entry

Shares of the Fund are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding shares of the Fund and is recognized as the owner of all shares for all purposes.

Investors owning shares of the Fund are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for shares of the Fund. DTC participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or **indirectly maintain a custodial relationship** with DTC. Beneficial owners of shares are not entitled to receive physical delivery of stock certificates or to have shares registered in their names, and they are not considered a registered owner of shares. Therefore, to exercise any right

Management of the Fund

as an owner of shares, a beneficial owner must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that a beneficial owner holds in book-entry or “street name” form.

Creation and Redemption of Shares

The Trust issues and sells Creation Units on a continuous basis through the Distributor, without a sales load, at their NAV next determined after receipt of a purchase order, on any day that the Exchange is open for business. Creation Units of shares may be purchased only by or through a DTC Participant that has entered into an Authorized Participant Agreement with the Distributor. Investors who are not Authorized Participants must make appropriate arrangements with an Authorized Participant. The Fund may direct portfolio transactions to certain Authorized Participants or their affiliates in certain circumstances, such as to achieve best execution, but does not direct transactions based on the purchase/sale of fund shares. Due to the nature of the Fund’s investments, Authorized Participants generally will deposit cash in exchange for a specified number of Creation Units, although the Fund may permit Authorized Participants to deposit a portfolio of securities approximating the holdings of the Fund or a combination of cash and a portfolio of securities approximating the holdings of the Fund in exchange for a specified amount of Creation Units. To the extent practicable, the composition of such portfolio generally corresponds pro rata to the holdings of the Fund.

Investors should be aware that their particular broker may not be a DTC Participant or may not have executed an Authorized Participant Agreement, in which case orders to purchase Creation Units of shares may have to be placed by the investor’s broker through an Authorized Participant. As a result, purchase orders placed through an Authorized Participant may result in additional charges to such investor. The Trust expects to enter into Authorized Participant Agreements with only a small number of DTC Participants.

Purchases through and outside the Clearing Process

An Authorized Participant may place an order to purchase (or redeem) Creation Units (i) through the Continuous Net Settlement clearing processes of the National Securities Clearing Corporation (“NSCC”) as such processes have been enhanced to effect purchases (and redemptions) of Creation Units, such processes being referred to herein as the “Clearing Process,” or (ii) outside the Clearing Process. To purchase or redeem through the Clearing Process, an Authorized Participant must be a member of NSCC that is eligible to use the Continuous Net Settlement system. For purchase orders placed through the Clearing Process, the Authorized Participant Agreement authorizes the Distributor to transmit through the Fund’s transfer agent (the “Transfer Agent”) to NSCC, on behalf of an Authorized Participant, such

trade instructions as are necessary to effect the Authorized Participant’s purchase order. Pursuant to such trade instructions to NSCC, the Authorized Participant agrees to deliver the requisite deposit securities and the balancing amount to the Trust, together with the Transaction Fee and such additional information as may be required by the Distributor. A purchase order must be received by the Distributor by 4:00 p.m. Eastern Time if transmitted by mail or by 3:00 p.m. Eastern Time if transmitted by telephone, facsimile or other electronic means permitted under the Participant Agreement in order to receive that day’s Closing NAV per Share.

An Authorized Participant that wishes to place an order to purchase Creation Units outside the Clearing Process must state that it is not using the Clearing Process and that the purchase instead will be effected through a transfer of securities and cash directly through DTC. Purchases (and redemptions) of Creation Units settled outside the Clearing Process will be subject to a higher Transaction Fee than those settled through the Clearing Process.

Purchase orders effected outside the Clearing Process are likely to require transmittal by the Authorized Participant earlier on the Transmittal Date than orders effected using the Clearing Process. Those persons placing orders outside the Clearing Process should ascertain the deadlines applicable to DTC and the Federal Reserve Bank wire system by contacting the operations department of the broker or depository institution effectuating such transfer.

Rejection of Purchase Orders

The Trust reserves the absolute right to reject a purchase order transmitted to it by the Distributor in respect of the Fund if (a) the purchaser or group of purchasers, upon obtaining the shares ordered, would own 80% or more of the currently outstanding shares of the Fund; (b) the deposit securities delivered are not as specified by the Adviser and the Adviser has not consented to acceptance of an in-kind deposit that varies from the designated deposit securities; (c) acceptance of the purchase transaction order would have certain adverse tax consequences to the Fund; (d) the acceptance of the purchase transaction order would, in the opinion of counsel, be unlawful; (e) the acceptance of the purchase order transaction would otherwise, in the discretion of the Trust or the Adviser, have an adverse effect on the Trust or the rights of beneficial owners; (f) the value of a cash purchase amount, or the value of the balancing amount to accompany an in-kind deposit, exceeds a purchase authorization limit extended to an Authorized Participant by the custodian and the Authorized Participant has not deposited an amount in excess of such purchase authorization with the custodian prior to the relevant cut-off time for the Fund on the Transmittal Date; or (g) in the event

that circumstances outside the control of the Trust, the Distributor and the Adviser make it impractical to process purchase orders. The Trust shall notify a prospective purchaser of its rejection of the order of such person. The Trust and the Distributor are under no duty, however, to give notification of any defects or irregularities in the delivery of purchase transaction orders nor shall either of them incur any liability for the failure to give any such notification.

Redemptions

Similarly, shares may be redeemed only in Creation Units at their NAV next determined after receipt of a redemption request in good order by the Distributor on any day on that the Exchange is open for business. The Fund reserves the right to reject any redemption request that is not in good order. The specific requirements for good order depend on the type of account and the method of redemption. Contact NexPoint if you have any questions about your particular circumstances. Generally, “good order” means that the redemption request meets all applicable requirements described in this Prospectus.

The Trust will not redeem shares in amounts less than Creation Units.

Beneficial owners also may sell shares in the secondary market, but must accumulate enough shares to constitute a Creation Unit in order to have such shares redeemed by the Trust. There can be no assurance, however, that there will be sufficient liquidity in the public trading market at any time to permit assembly of a Creation Unit of shares. Investors should expect to incur brokerage and other costs in connection with assembling a sufficient number of shares to constitute a redeemable Creation Unit.

The Fund, however, may suspend the right of redemption and postpone payment for more than seven days: (i) during periods when trading on the Exchange is closed on days other than weekdays or holidays; (ii) during periods when trading on the Exchange is restricted; (iii) during any emergency which makes it impractical for the Fund to dispose of its securities or fairly determine the NAV of the Fund; and (iv) during any other period permitted by the SEC for your protection.

Because new shares may be created and issued on an ongoing basis, at any point during the life of the Fund, a “distribution,” as such term is used in the Securities Act, may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the Securities Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary transactions), and thus dealing with shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is available only with respect to transactions on a national securities exchange.

Redemption Proceeds

A redemption request received by the Fund will be effected at the NAV per share next determined after the Fund receives the request in good order. While the Fund will generally pay redemptions proceeds in cash, the Fund may pay your redemption proceeds wholly or partially in portfolio securities. In this event, the portfolio of securities the Fund will deliver upon redemption of Fund shares may differ from the portfolio of securities required for purchase of a Creation Unit. You will be exposed to market risk until you convert these portfolio securities into cash, you will likely pay commissions upon any such conversion, and you may recognize taxable gain or loss resulting from fluctuations in value of the portfolio securities between the conversion date and the redemption date. If you receive illiquid securities, you could find it more difficult to sell such securities and may not be able to sell such securities at prices that reflect the Adviser’s or your assessment of their fair value or the amount paid for them by the Fund. Illiquidity may result from the absence of an established market for such securities as well as legal, contractual or other restrictions on their resale and other factors.

Transaction Fees

Authorized Participants are charged standard creation and redemption transaction fees (“Transaction Fees”) to offset transfer and other transaction costs associated with the issuance and redemption of Creation Units. Purchasers and redeemers of Creation Units for cash are required to pay an additional variable charge (up to the maximum amount shown below) to compensate for brokerage and market impact expenses. The standard creation and redemption transaction fees are set forth below. The standard creation transaction fee is charged to each purchaser on the day such purchaser creates a Creation Unit. The standard creation transaction fee is the same regardless of the number of Creation Units purchased by an investor on the applicable business day. Similarly, the standard redemption transaction fee is the same regardless of the number of Creation Units redeemed on the same day. Creations and redemptions through DTC for cash (when cash creations and redemptions

Management of the Fund

are available or specified) are also subject to an additional variable charge up to the maximum amounts shown in the table below. In addition, purchasers of shares in Creation Units are responsible for payment of the costs of transferring securities to the Fund and redeemers of shares in Creation Units are responsible for the costs of transferring securities

from the Fund. Investors who use the services of a broker or other financial intermediary may pay fees for such services.

The following table shows, as of the date of commencement of operations, the approximate value of one Creation Unit, standard fees and maximum additional charges for creations and redemptions for the Fund:

Approximate Value of a Creation Unit	Creation Unit Size	Standard Creation/Redemption Transaction Fee**	Maximum Additional Charge for Creations*	Maximum Additional Charge for Redemptions*
\$2,000,000	100,000 shares	\$500	1.0%	1.0%

* As a percentage of the net asset value per Creation Unit, inclusive of the standard transaction fee.

** Transaction fees may not be waived.

Net Asset Value

The NAV per share of the Fund is calculated as of 4:00 p.m., Eastern Time, on each day that the Exchange is open for business, except on days on which regular trading on the Exchange is scheduled to close before 4:00 p.m., when the Fund calculates NAV as of the scheduled close of regular trading. The Exchange is open Monday through Friday, but currently is scheduled to be closed on New Year's Day, Dr. Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day or on the preceding Friday or subsequent Monday when a holiday falls on a Saturday or Sunday, respectively.

The NAV per share of the Fund is computed by dividing the value of the Fund's net assets (i.e., the value of its securities and other assets less its liabilities, including expenses payable or accrued but excluding capital stock and surplus) attributable to the Fund by the total number of shares of the Fund outstanding at the time the determination is made.

Pursuant to Rule 2a-5 under the 1940 Act, the Board has designated the Adviser as the Fund's valuation designee to perform the fair valuation determination for securities and other assets held by the Fund. The Adviser, acting through its "Valuation Committee," is responsible for determining the fair value of investments for which market quotations are not readily available. The Valuation Committee is comprised of officers of the Adviser and certain of the Adviser's affiliated companies and determines fair value and oversees the calculation of the NAV. The Valuation Committee is subject to Board oversight and certain reporting and other requirements intended to provide the Board the information it needs to oversee the Adviser's fair value determinations

The Fund's portfolio securities are valued in accordance with valuation policies and procedures established by the Adviser

and approved by the Board. The value of the Fund's investments is generally determined as follows:

- Portfolio securities for which market quotations are readily available are valued at their current market value.
- Foreign securities listed on foreign exchanges are valued based on quotations from the primary market in which they are traded and are translated from the local currency into U.S. dollars using current exchange rates. Foreign securities may trade on weekends or other days when the Fund does not calculate NAV. As a result, the market value of these investments may change on days when you cannot buy or redeem shares of the Fund.
- Investments by the Fund in any mutual fund are valued at their respective NAVs as determined by those mutual funds each business day. The prospectuses for those mutual funds explain the circumstances under which those funds will use fair value pricing and the effects of using fair value pricing.
- All other portfolio securities, including derivatives and cases where market quotations are not readily available are valued at fair value as determined in good faith by the Adviser as valuation designee pursuant to procedures pursuant to procedures approved by the Board. Rule 2a-5 states that a market quotation is readily available only when that quotation is a quoted price (unadjusted) in active markets for identical investments that the Fund can access at the measurement date, provided that a quotation will not be readily available if it is not reliable. Market quotations may also be not "readily available" if a significant event occurs that causes the Adviser to believe that the market price of a security no longer represents the security's current value at the time of a Fund's NAV calculation. In determining the fair value price of a security, NexPoint may use a

number of other methodologies, including those based on discounted cash flows, multiples, recovery rates, yield to maturity or discounts to public comparables.

- Fair value pricing involves judgments that are inherently subjective and inexact; as a result, there can be no assurance that fair value pricing will reflect actual market value, and it is possible that the fair value determined for a security will be materially different from the value that actually could be or is realized upon the sale of that asset.

Valuing the Fund's investments using fair value pricing will result in using prices for those investments that may differ from current market valuations. Use of fair value prices and certain current market valuations could result in a difference between the prices used to calculate the Fund's NAV and the prices used by the Underlying Index, which, in turn, could result in a difference between the Fund's performance and the performance of the Underlying Index.

Share Prices

The trading prices of the Fund's shares in the secondary market generally differ from the Fund's daily NAV and are affected by market forces such as supply and demand, economic conditions and other factors. Information regarding the intraday value of shares of the Fund, also known as the "indicative optimized portfolio value" ("IOPV"), is disseminated every 15 seconds throughout the trading day by the national securities exchange on which the Fund's shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of the securities and/or cash required to be deposited in exchange for a Creation Unit. The IOPV does not necessarily reflect the precise composition of the current portfolio of securities held by the Fund at a particular point in time or the best possible valuation of the current portfolio. Therefore, the IOPV should not be viewed as a "real-time" update of the Fund's NAV, which is computed only once a day. The IOPV is generally determined by using both current market quotations and/or price quotations obtained from broker-dealers that may trade in the portfolio securities held by the Fund. The quotations of certain Fund holdings may not be updated during U.S. trading hours if such holdings do not trade in the U.S. The Fund is not involved in, or responsible for, the calculation or dissemination of the IOPV and makes no representation or warranty as to its accuracy.

Premium/Discount Information

Information regarding how often the shares of the Fund traded on a national exchange at a price above (*i.e.*, at a premium) or below (*i.e.*, at a discount) the NAV of the Fund for various time periods can be found at www.nexpointassetmgmt.com/snlm-ETF/

NAV is the price per share at which the Fund issues and redeems shares. It is calculated in accordance with the standard formula for valuing mutual fund shares. The price used to calculate market returns ("Market Price") of the Fund generally is determined using the midpoint between the bid and the ask on the primary securities exchange on which shares of the Fund are listed for trading, as of the time that the Fund's NAV is calculated. The Fund's Market Price may be at, above or below its NAV.

The NAV of the Fund will fluctuate with changes in the market value of its portfolio holdings. The Market Price of the Fund will fluctuate in accordance with changes in its NAV, as well as market supply and demand. Shareholders may pay more than NAV when they buy Fund shares and receive less than NAV when they sell those shares, because shares are bought and sold at current Market Prices.

Premiums or discounts are the differences (expressed as a percentage) between the NAV and Market Price of the Fund on a given day, generally at the time the NAV is calculated. A premium is the amount that the Fund is trading above the reported NAV, expressed as a percentage of the NAV. A discount is the amount that the Fund is trading below the reported NAV, expressed as a percentage of the NAV.

Dividends and Other Distributions

The Fund intends to declare and pay dividends of net investment income monthly and to pay any capital gain distributions on an annual basis. There is no fixed dividend rate, and there can be no assurance that the Fund will pay any dividends or make any capital gain distributions.

No dividend reinvestment service is provided by the Trust. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Fund for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Fund purchased in the secondary market. Dividends and other taxable distributions are taxable to you, whether received in cash or reinvested in additional shares of the Fund pursuant to DTC's Dividend Reinvestment Service. Shareholders using the Dividend Reinvestment Service should consult their broker-dealer for more information about the specific terms of the service, including potential tax consequences to such shareholders in light of their particular circumstances.

Management of the Fund

Index Providers

The Fund is based on the Markit iBoxx USD Liquid Leveraged Loan Index, provided by Markit, Inc., a leading provider of independent data, portfolio valuations and OTC derivatives trade processing to the financial markets. The Underlying Index is sponsored by Markit Indices Limited (the “Index Provider”), an organization that is independent of the Fund and the Adviser. The Index Provider determines the composition and relative weightings of the securities in the Underlying Index and publishes information regarding the market value of the Underlying Index. The Index Provider is not affiliated with the Trust, the Adviser, the Distributor, or any of their respective affiliates. Markit Valuations Limited also serves as the primary pricing source for the Fund.

Markit’s dual roles as index provider and pricing source may give rise to a conflict of interest in the sense that Markit has a financial interest in maintaining consistent values for the instruments held in both the Fund and the index. Further information about the Index Provider and the Underlying Index is available at <http://www.markit.com>.

The Underlying Index referenced herein is the property of Markit Indices Limited and has been licensed for use in connection with the Fund. Each party acknowledges and agrees that the Fund is not sponsored, endorsed or promoted by the Index Provider. The Index Provider makes no representation whatsoever, whether express or implied, and hereby expressly disclaim all warranties (including, without limitation, those of merchantability or fitness for a particular purpose or use), with respect to the Underlying Index or any data included therein or relating thereto, and in particular disclaim any warranty either as to the quality, accuracy and/or completeness of the Underlying Index or any data included therein, the results obtained from the use of the Underlying Index and/or the composition of the Underlying Index at any particular time on any particular date or otherwise and/or the creditworthiness of any entity, or the likelihood of the occurrence of a credit event or similar event (however defined) with respect to an obligation, in the Underlying Index at any particular time on any particular date or otherwise.

The Index Provider shall not be liable (whether in negligence or otherwise) to the parties or any other person for any error in the Underlying Index, and the Index Provider is under no obligation to advise the parties or any person of any error therein. The Index Provider makes no representation whatsoever, whether express or implied, as to the advisability of purchasing or selling the Fund, the ability of the Underlying Index to track relevant markets’ performances, or otherwise relating to the Underlying Index or any transaction or product with respect thereto, or of assuming any risks in connection therewith. The Index Provider has no obligation to take the needs of any party into consideration in determining, composing or calculating the Underlying Index. No party

purchasing or selling the Fund, nor the Index Provider, shall have any liability to any party for any act or failure to act by the Index Provider in connection with the determination, adjustment, calculation or maintenance of the Underlying Index. The Index Provider and its affiliates may deal in any obligations that compose the Underlying Index, and may, where permitted, accept deposits from, make loans or otherwise extend credit to, and generally engage in any kind of commercial or investment banking or other business with the issuers of such obligations or their affiliates, and may act with respect to such business as if the Underlying Index did not exist, regardless of whether such action might adversely affect the Underlying Index or the Fund.

Taxation

The following discussion is a summary of some of the important U.S. federal income tax considerations generally applicable to an investment in the Fund. Your investment may have other tax implications. The discussion reflects provisions of the Code, existing Treasury regulations, rulings published by the Internal Revenue Service (“IRS”), and other applicable authorities, as of the date of this Prospectus. These authorities may be changed, possibly with retroactive effect, or subject to new legislation or administrative or judicial interpretations. No attempt is made to present a detailed explanation of all U.S. federal, state, local and foreign tax law concerns affecting the Fund and its shareholders (including shareholders owning large positions in the Fund) or to address all aspects of taxation that may apply to individual shareholders or to specific types of shareholders, such as foreign persons, that may qualify for special treatment under U.S. federal income tax laws. The discussion set forth herein does not constitute tax advice. Please consult your tax advisor about foreign, federal, state, local or other tax laws applicable to you. For more information, please see “Income Tax Considerations” in the SAI.

The Fund has elected to be treated and intends to qualify annually as a regulated investment company (“RIC”) under Subchapter M of the Code including by complying with the applicable qualifying income and diversification requirements. If the Fund so qualifies and satisfies certain distribution requirements, the Fund generally will not be subject to U.S. federal income tax on income and gains that the Fund distributes to its shareholders in a timely manner in the form of dividends or capital gain dividends (as defined below). As described in “Dividends and Other Distributions” above, the Fund intends to distribute at least annually all or substantially all of its net investment income and net realized capital gains. The Fund will be subject to a Fund-level income tax at regular corporate income tax rates on any taxable income or gains that it does not distribute to its shareholders.

Amounts not distributed on a timely basis in accordance with a calendar year distribution requirement will be subject to a nondeductible 4% U.S. federal excise tax at the Fund level. To avoid the tax, the Fund must distribute during each calendar year an amount at least equal to the sum of (i) 98% of its ordinary income (taking into account certain deferrals and elections) for the calendar year, (ii) 98.2% of its capital gains in excess of its capital losses (adjusted for certain ordinary losses) for a one-year period ending on October 31 of the calendar year, and (iii) any undistributed amounts described in (i) and (ii) above from the prior year on which the Fund paid no U.S. federal income tax. While the Fund intends to distribute any income and capital gain in the manner necessary to minimize imposition of the 4% U.S. federal excise tax, there can be no assurance that sufficient amounts of the Fund's taxable income and capital gain will be distributed to avoid entirely the imposition of the tax. In that event, the Fund will be liable for the excise tax only on the amount by which it does not meet the foregoing distribution requirement.

Additionally, if for any taxable year the Fund were not to qualify as a RIC and were ineligible to or otherwise did not cure such failure, all of its taxable income and gain would be subject to a Fund-level tax at regular corporate income tax rates without any deduction for distributions to shareholders. This treatment would reduce the Fund's net income available for investment or distribution to its shareholders. In addition, all distributions from earnings and profits, including any net long-term capital gains, would be taxable to shareholders as ordinary income. Some portions of such distributions may be eligible for the dividends-received deduction in the case of corporate shareholders or to be treated as "qualified dividend income" in the case of individual shareholders. The Fund also could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a RIC that is accorded special tax treatment.

The tax rules applicable to certain derivative instruments in which the Fund may invest are uncertain under current law, including the provisions applicable to RICs under Subchapter M of the Code. For instance, the timing and character of income or gains arising from certain derivatives can be uncertain, including for Subchapter M purposes. Accordingly, while the Fund intends to account for such transactions in a manner it deems to be appropriate, an adverse determination or future guidance by the IRS with respect to one or more of these rules (which determination or guidance could be retroactive) may adversely affect the Fund's ability to meet one or more of the relevant requirements to maintain its qualification as a RIC, as well as to avoid Fund-level taxes.

Certain of the Fund's investment practices, including derivative transactions and hedging activities, generally, as well as the Fund's investments in certain types of securities, including Component Securities, may be subject to special and complex U.S. federal income tax provisions that may, among other things: (i) disallow, suspend or otherwise limit the allowance of certain losses or deductions; (ii) convert lower taxed long-term capital gain into higher taxed short-term capital gain or ordinary income; (iii) accelerate the recognition of income; (iv) convert short-term losses into long-term losses; (v) cause the Fund to recognize income or gain without a corresponding receipt of cash; (vi) adversely affect the time as to when a purchase or sale of securities is deemed to occur; (vii) cause adjustments in the holding periods of the Fund's securities; or (viii) otherwise adversely alter the characterization of certain complex financial transactions. These U.S. federal income tax provisions could therefore affect the amount, timing and/or character of distributions to Fund shareholders. In particular, a portion of the Fund's investments in Component Securities or other debt instruments may be treated as having "market discount" and/or "original issue discount" for U.S. federal income tax purposes, which, in some cases, could be significant, and could cause the Fund to recognize income in respect of these investments before, or without receiving, cash representing such income. The Fund intends to monitor its transactions, may make certain tax elections, and may be required to, among other things, dispose of securities (including at a time when it is not advantageous to do so) to mitigate the effect of these provisions, prevent the Fund's disqualification as a RIC, or avoid incurring Fund-level U.S. federal income and/or excise tax.

Investments in below investment grade Component Securities and other debt instruments that are at risk of or in default present special tax issues for the Fund. Tax rules are not entirely clear about issues such as whether and to what extent the Fund should recognize market discount on a distressed debt obligation, when the Fund may cease to accrue interest, original issue discount or market discount, when and to what extent the Fund may take deductions for bad debts or worthless securities and how the Fund should allocate payments received on obligations in default between principal and income. These and other related issues will be addressed by the Fund as necessary, in order to seek to ensure that it distributes sufficient income to preserve its status as a RIC and that it does not become subject to Fund-level U.S. federal income and/or excise taxes.

The Fund's income from or its gross proceeds received on the disposition of its investments in foreign countries may be subject to withholding and other taxes imposed by foreign countries on interest, capital gains or other income or proceeds. Tax treaties between the U.S. and other countries

Management of the Fund

may reduce or eliminate such taxes. Foreign taxes paid by the Fund will reduce the return from the Fund's investments. The Fund does not expect that it will be eligible to elect to treat any foreign taxes it paid as paid by its shareholders, who therefore will not be entitled to credits or deductions for such taxes on their own returns.

Distributions paid to you by the Fund from net capital gain (that is, the excess of any net long-term capital gain over net short-term capital loss, in each case with reference to any loss carryforwards) that the Fund reports as capital gain dividends ("capital gain dividends") generally are taxable to you as long-term capital gain includible in net capital gain and taxed to individuals at reduced rates, regardless of how long you have held your shares. Distributions of investment income reported by the Fund as derived from "qualified dividend income" will be taxed in the hands of individuals at the rates applicable to long-term capital gains, provided holding periods and other requirements are met at both the shareholder and Fund level. The Fund generally does not expect that a significant portion of Fund distributions will qualify for favorable tax treatment as "qualified dividend income" for individual shareholders. All other dividends paid to you by the Fund (including dividends from short-term capital gain (that is, the excess of any net short-term capital gain over any net long-term capital loss)) from its current or accumulated earnings and profits generally are taxable to you as ordinary income.

A Medicare contribution tax of 3.8% is imposed on the "net investment income" of certain individuals, estates and trusts to the extent their income exceeds certain threshold amounts. Net investment income generally includes for this purpose dividends paid by the Fund, including any capital gain dividends, and capital gains recognized on the taxable sale, redemption or exchange of shares of the Fund. Shareholders are advised to consult their tax advisors regarding the possible implications of this additional tax on their investment in the Fund.

If, for any taxable year, the Fund's total distributions exceed both current earnings and profits and accumulated earnings and profits, the excess will generally be treated as a tax-free return of capital up to the amount of your tax basis in the shares. The amount treated as a tax-free return of capital will reduce your tax basis in the shares, thereby increasing your potential gain or reducing your potential loss on the subsequent sale of the shares. Any amounts distributed to you in excess of your tax basis in the shares will be taxable to you as capital gain (assuming the shares are held as a capital asset).

Dividends and other taxable distributions are taxable to you, whether received in cash or reinvested in additional shares of the Fund pursuant to DTC's Dividend Reinvestment Service

(see "Dividends and Other Distributions"). Dividends and other distributions paid by the Fund generally are treated as received by you at the time the dividend or distribution is made. If, however, the Fund pays you a dividend in January that was declared in the previous October, November or December and you were a shareholder of record on a specified record date in one of those months, then such dividend will be treated for tax purposes as being paid by the Fund and received by you on December 31 of the year in which the dividend was declared. The price of shares purchased at any time may reflect the amount of a forthcoming distribution. If you purchase shares just prior to the ex-dividend date for a distribution, you generally will receive a distribution that will be taxable to you even though it represents in part a return of your invested capital.

The Fund (or your broker or other financial intermediary through which you own your shares) will send information after the end of each calendar year setting forth the amount and tax status of any dividends or other distributions paid to you by the Fund. Dividends and other distributions may also be subject to state, local and other taxes.

If you sell or otherwise dispose of any of your shares of the Fund (including through a redemption), you will generally recognize a gain or loss in an amount equal to the difference between your tax basis in such shares of the Fund and the amount you receive upon disposition of such shares. If you hold your shares as capital assets, any such gain or loss will be long-term capital gain or loss if you have held (or are treated as having held) such shares for more than one year at the time of sale. All or a portion of any loss you realize on a taxable sale or exchange of your shares of the Fund will be disallowed if you acquire other shares of the Fund (whether through the reinvestment of dividends or otherwise) within a 61-day period beginning 30 days before and ending 30 days after your sale or exchange of the shares. In such case, the basis of the shares acquired will be adjusted to reflect the disallowed loss. In addition, any loss realized upon a taxable sale or exchange of Fund shares held (or deemed held) by you for six months or less will be treated as long-term, rather than short-term, to the extent of any capital gain dividends received (or deemed received) by you with respect to those shares. Present law taxes both long-term and short-term capital gains of corporations at the rates applicable to ordinary income.

The Fund (or your broker or other financial intermediary through which you own your shares) may be required to withhold, for U.S. federal backup withholding tax purposes, a portion of the dividends, distributions and redemption proceeds payable to you if: (i) you fail to provide the Fund (or the intermediary) with your correct taxpayer identification number (in the case of an individual, generally, such individual's social security number) or to make the required

certification; or (ii) the Fund (or the intermediary) has been notified by the IRS that you are subject to backup withholding. Certain shareholders are exempt from backup withholding. Backup withholding is not an additional tax and any amount withheld may be refunded or credited against your U.S. federal income tax liability, if any, provided that you furnish the required information to the IRS.

Special Considerations for Purchase and Redemption of Creation Units

An Authorized Participant that purchases Creation Units in exchange for cash, portfolio securities or a combination thereof generally will recognize a gain or a loss with respect to the portfolio securities on the exchange. The gain or loss generally will be equal to the difference between the market value of the Creation Units at the time and the sum of the cash paid by the Authorized Participant and the Authorized Participant's aggregate basis in any securities surrendered by the Authorized Participant. An Authorized Participant that redeems Creation Units for cash and/or portfolio securities generally will recognize a gain or loss equal to the difference between the Authorized Participant's basis in the Creation Units surrendered and the sum of the cash received by the Authorized Participant and the aggregate market value of any securities received by the Authorized Participant. In certain cases, however, the IRS may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Authorized Participants exchanging securities should consult their own tax advisor with respect to whether or when a loss might be deductible.

Gain or loss recognized by an Authorized Participant upon a purchase of Creation Units in exchange for Component Securities or other debt instruments may be capital or ordinary gain or loss depending on the circumstances. Any capital gain or loss realized upon a purchase of Creation Units in exchange for Component Securities or other debt instruments generally will be treated as long-term capital gain or loss if the securities have been held for more than one year. Any capital gain or loss realized upon a redemption of Creation Units generally will be treated as long-term capital gain or loss if the Creation Units have been held for more than one year. Otherwise, such capital gain or loss generally will be treated as short-term capital gain or loss. Authorized Participants should consult their own tax advisor with respect to the tax treatment to them of any creation or redemption transaction.

THE FOREGOING IS A GENERAL AND ABBREVIATED SUMMARY OF THE PROVISIONS OF THE CODE AND THE TREASURY REGULATIONS IN EFFECT AS THEY DIRECTLY GOVERN THE TAXATION OF THE FUND AND ITS SHAREHOLDERS. THESE PROVISIONS ARE SUBJECT TO CHANGE BY LEGISLATIVE OR ADMINISTRATIVE ACTION, AND ANY SUCH CHANGE MAY BE RETROACTIVE. A MORE COMPLETE DISCUSSION OF THE TAX RULES APPLICABLE TO THE FUND AND ITS SHAREHOLDERS, INCLUDING FOREIGN SHAREHOLDERS, CAN BE FOUND IN THE STATEMENT OF ADDITIONAL INFORMATION, WHICH IS INCORPORATED BY REFERENCE INTO THIS PROSPECTUS. SHAREHOLDERS ARE URGED TO CONSULT THEIR TAX ADVISERS REGARDING SPECIFIC QUESTIONS AS TO U.S. FEDERAL, STATE, LOCAL AND FOREIGN INCOME OR OTHER TAXES.

Financial Highlights

Highland/iBoxx Senior Loan ETF

The financial highlights table is intended to help you understand the Fund's financial performance for its past five fiscal years. Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information for the years ended June 30, 2022, 2021 and 2020 has been audited by Cohen & Company, Ltd. ("Cohen"), whose report, along with the Fund's financial statements, are included in the Fund's annual report, which is available upon request. The information for the years ended June 30, 2019 and 2018 has been audited and reported on by other independent registered public accounting firms. As of June 18, 2020, Cohen, an independent registered public accounting firm located at 1350 Euclid Avenue, Suite 800, Cleveland, OH 44115, serves as independent registered accounting firm to the Fund. To request the Fund's 2022 Annual Report, please call the Fund at (855) 799-4757.
